## DIRECTIONS

- 1.. Water thoroughly 24 hours before application. Avoid additional water for at least 48 hours. (after application)
- 2.. DO NOT APPLY IMMEDIATELY PRIOR TO OR DURING TEMPERATURES IN EXCESS OF 75°F. Treatment during cool early evening or mid-morning is best.
- 3.. Dichondra lawns should not be treated immediately after mowing. Wait until the dichondra has had time to produce some new growth.
- 4.. Add 4oz. "SPURGE-X" to one gallon of water. This will treat about 100 sq.ft. (10'X10', 5'X20", etc.) Application should be by a PRESSURE- TYPE sprayer (Hudson). Hose proportioners or water cans are not very effective and should NOT be used.
- 5.. Saturate spurge foliage but if possible, avoid excessive contact with Dichondra. You may get some damage to the dichondra (tip burn) but it will soon completely recover. "SPURGE-X" will not interfere with the germination of seeds.
- 6.. Clean sprayer thoroughly immediately before and after use. Be sure to flush sprayer system with clear water under pressure.
- 7.. Limit treatment to Dichondra lawns to two applications at 1 to 2 week intervals.

## TESTED

"SPURGE-X" has been extensively tested in Southern California on weed problems in Dichondra. The results showed effective control of spurge without permanent damage to Dichondra.
