STORAGE AND DISPOSAL
 Do not contaminate water, food or feed by storage or disposal. Open dumping is prohibited. Pesticide spray mixture or rinsates which cannot be used should be disposed of in a landfill approved for pesticides or buried in a safe place away from water supplies and useful plants. **DO NOT REUSE EMPTY CONTAINER.** Small containers (5 gallons and under) may be sealed, wrapped and put in trash collection. Larger steel containers (30 and 55 gallons) must be resealed and offered for reconditioning, or may be triple rinsed (or equivalent) and offered for commercial cleaning, reconditioning or recycling, disposed of in an approved landfill, or buried in a safe place. Consult Federal, State or local disposal authorities for approved alternative procedures.

LIMIT OF WARRANTY AND LIABILITY
 This company warrants that this material conforms to the chemical description on the label and is reasonably fit for the purposes referred to in the directions for use. This product is sold subject to the understanding that the buyer assumes all risks of use or handling which may result in loss or damage which are beyond the control of the seller, for example, incompatibility with other products and its use or application. **NO OTHER EXPRESSED OR IMPLIED WARRANTY OF FITNESS OR MERCHANTABILITY IS MADE.** The exclusive remedy of the buyer, and the limit of liability of this company or any other seller for any and all losses, injuries or damages resulting from the use or handling of this product shall be the purchase price paid by the user or buyer for the quantity of this product involved. The buyer and all users are deemed to have accepted the terms of this notice which may not be varied by any verbal or written agreement.

QUART LEVEL

Woodie Penta

Woodie Penta is a ready-to-use oil solution for the protection of exterior wood products (including but not limited to fence posts, poles, foundation timber, dimension lumber, decking, wood shingles, trim wood, exterior doors, window sash and frames as well as sidings and plywoods) against fungus growths which cause rot and stain, termites, Lyctus (powder post) beetles and carpenter ants. Woodie Penta contains water repellents which aid in the control of shrinking, swelling, end checking, grain raising and warping.

DIRECTIONS FOR USE

FOR EXTERIOR USE ONLY. Because of potential hazards Woodie Penta solution and treated wood and waste must be handled as per warnings on side panel.

Before treatment be sure that unsound wood has been cut out and removed two feet beyond visible evidence of decay. The wood should be normally dry, free from bark and paint or other treatments which will prevent or impede the penetration of Woodie.

WOOD PRESERVATION AND DIMENSIONAL CONTROL. For best results Woodie should be applied so that all surfaces are thoroughly covered and maximum penetration into the wood occurs. To maintain dimensional stability (control swelling and shrinkage) it is particularly important to have heavy absorption at joints and wherever end grain exists because moisture pickup is usually many times greater through end grain than at the flat or edge grain surface.

APPLICATION Complete Immersion - The wood should be treated after all cuts have been made and prior to installation. It is recommended that millwork be immersed for 3 minutes. For other items complete immersion of the wood is generally recommended for 5 to 15 minutes per inch of thickness. For prevention of rot and initial attack by termites, powder post (Lyctus) beetles and carpenter ants soak the wood for 12-48 hours depending on thickness and condition of the wood.

APPLICATION Brush On - Immersion treating is recommended but where this is impractical as in the case of an existing structure, prepare the wood as above and brush on the Woodie Penta solution to run-off on all surfaces, allow to soak in, and apply at least one more heavy coating. Be sure that joints and end grain are thoroughly covered - make extra applications if necessary. Use care so that Woodie solution does not contact asphalt products (tar paper, composition shingles or similar items) and do not apply in such a way that it will stain plaster or other surfaces.

TERMITE, CARPENTER ANT, LYCTUS (POWDER POST) BEETLE CONTROL. For protection of new wood prior to installation and for application to wood in place follow directions given above. Spraying or injecting Woodie Penta into cavities made by the insects has proved useful for clearing out insects living in the wood. Poisoning the insect colony at the source is the surest way to control them, therefore treatment of infested wood is usually supplemental. Treatment of the wood supplements treating of the soil against subterranean termites. Surface coatings may be used to seal the preservative into wood after solvents have completely evaporated - 48 hours should be sufficient. Since there is a potential hazard from skin contact after treating outside floors, furniture and the like, sealing of these items with paint or other coating or a heavy duty paste wax is necessary to insure against this hazard.

COVERAGE - Approximately 5 to 10 gallons per thousand board feet for immersion treating - 400 square feet per gallon for brush application on smooth woods. Textured surfaces and prolonged treating will use more solution.
