

SANITIZING DIRECTIONS

DAIRY OR FOOD PROCESSING EQUIPMENT

1. Clean equipment thoroughly with proper FulSan Products.
 2. Rinse with potable water.
 3. For minimum of 2 minutes wet surface with solution of 200 ppm available chlorine (2 ozs. CLX in 40 gals. water). A starting concentration of 100 ppm available chlorine may be used if test kit is available to prevent concentration from falling below 50 ppm chlorine (1 oz. in 40 gals water = 100 ppm chlorine).
- Do Not Rinse with water after Chlorine Sanitizing with 100 ppm. If more than 100 ppm is used rinse with potable water.

EGG WASHING (FOR HUMAN CONSUMPTION)

1. Clean eggs with FulSan #1 Automatic Egg Washing Detergent.
2. Rinse.
3. Sanitize with 200 ppm available chlorine solution (2 ozs. in 40 gals water). Rinse with potable water.

SWIMMING POOL CHLORINATION DIRECTIONS

When starting up a new pool, superchlorinate to satisfy chlorine demand and to establish a chlorine residual of 1.0 ppm to 1.5 ppm available chlorine. To accomplish this, add 2 ozs. FulSan CLX Chlorinating Chemical per 1,000 gallons of pool water. The next morning, add cyanuric acid at the rate of 4 oz. per 1,000 gallons to stabilize the pool.

FulSan CLX should be added daily at a rate of 1/2 oz. to 1/4 oz. per 1,000 gallons of pool water to maintain a chlorine residual at all times of 1.0 ppm to 1.5 ppm as determined by a standard test kit. The pH should be maintained between 7.2 and 7.6.

A shock treatment should be made every week during hot weather or after heavy rains. Less frequent shock treatments may be made during cool weather. For the shock treatment, add 2 ozs. of FulSan CLX per 1,000 gallons of pool water. Swimmers should not be permitted in the pool after the shock treatment until the chlorine residual has returned to the 1.0 ppm to 2.0 ppm range.

Keep in mind that a slight flexibility must be maintained in the event of heavy accumulation of dust and dirt caused by storms or other heavy bathing loads which require additional dosages as needed to maintain the chlorine residual between 1.0 ppm and 2.0 ppm.
