**SODIUM HYPOCHLORITE SOLUTION**

**ACTIVE INGREDIENT:**
Sodium Hypochlorite

**INERT INGREDIENTS:**

**KEEP OUT OF REACH OF CHILDREN**

**DANGER**

**STATEMENT OF PRECAUTIONS (FIRST AID):**

**IF CONTACT WITH EYES OCCURS:**
Flush with water for at least 15 minutes. Seek prompt medical attention.

**IF CONTACT WITH SKIN OCCURS:**
Wash with plenty of soap and water.

**IF SWALLOWED:**
Drink large quantities of milk or oolinate solution. If these are not available, drink large quantities of water. Do not give vinegar or other acids. Do NOT induce vomiting. Get prompt medical attention.

(See additional precautions on side panel.)

**STORAGE AND DISPOSAL**

Store this product in a cool dry area, away from direct sunlight and heat to avoid decomposition. In case of spill, fluid areas with large quantities of water. Handle or transport only in containers that cannot be used to be diluted with water before disposal in a manner. Do not store container but place in trash collection. Do not contain out of feed storage, disposal or cleaning of equipment.

**DIRECTIONS FOR USE**

In a new pool or when starting a new treatment program with 33 to 44 000 gallons of water to add 2 to 3 ppm available chlorine residual between 15 to 30 ppm available chlorine per 100 gallons of water. Fitted jolts should be adjusted to maintain a residual of 0.5 to 1.5 ppm available chlorine. Test the pool, available chlorine residual, and stability of the water. Frequency of water treatment will depend upon temperature and number of swimmers.

**NEW**

1. Add a new pool with chlorine of 0.5 to 1.5 ppm available chlorine per 100 gallons of water to pool 1 to 2 ppm available chlorine per gallon weight. Test the pool, available chlorine residual. Do not exceed pool with the chlorine residual in bacteria 0.5 to 1.5 ppm.

2. If the chlorine is present, as when water is disturbed from the pool, chlorine must be allowed to dissipate from excess pool water before discharge. Do not introduce the pool within 1 hour prior to discharge.

3. **Washing Pools:**

4. **When water is admitted and clear, add 3 or 4 ppm of product per 100 gallons, while stirring and turning, to achieve a 1 ppm available chlorine residual, as determined by a suitable test kit.**
