

### **LEFT PANEL**

**ALGEX** is a concentrated solution of a quaternary ammonium halide and is a most effective agent for the control of growth of algae and algal slime-forming organisms in public and private swimming pools. Continued usage, as directed, will improve the appearance and cleanliness of the pool.

- PREVENTS unsightly green coating
- SIMPLIFIES cleaning operation
- MAINTAINS sure-grip floors

**ALGEX**, in use dilution, is non-toxic and non-irritating to the skin or mucous membranes of the eyes, nose and throat.

**ALGEX** may be stored for prolonged periods of time without losing strength or effectiveness.

**ALGEX**, in use dilution, is not injurious to metals, tile, plastic, concrete or painted surfaces.

**CAUTION:** Avoid Contact With Skin. If contact occurs, wash with soap and water. Avoid Contact With Eyes. If contact occurs, flush with copious amounts of water. If irritation persists, obtain medical attention. Harmful if swallowed.

**CAUTION:** Do not allow to come in contact with foods.

**CAUTION:** **ALGEX** is a caustic surface active agent and must not be used with soap or anionic detergents.

**USE PANEL**

**DIRECTIONS FOR USE**

**Initial Dose:** One quart for each 10,000 gallons of water.

**Continuing Dose:** Add eight ounces for each 10,000 gallons of water every 14 days. In hot, sunny weather this treatment should be administered every 21 days. When system is drained and refilled, the initial and follow-up treatments must be repeated.

**Booster Dose:** Add eight ounces for each 10,000 gallons of water after a heavy or prolonged rainfall. Apply more frequently whenever the bathing load is unusually heavy.

---

The swimming pool should be properly cleaned and filled with fresh water before beginning algaecidal treatment. However, if it is impractical to empty the pool and algae growth is visible, then allow an initial dose to work overnight. By morning, the withered algae will have fallen to the bottom or may be brushed to the bottom and then swept out, while the level of the pool is dropped one or two feet. After removing the withered algae, add another initial dose followed by continuing doses as directed above.

ALBEX requires no special equipment for application. It may be poured directly into the water from any point around the pool or through any water circulating system.

At normal dosages, ALBEX is compatible with all chemicals normally used in the swimming pool.
