GENERAL INFORMATION

RIVERSIDE GRO BEAN is especially formulated for planter box treatment of soybean seed to control seed and soil-borne diseases, including damping-off, seed decay organisms and seedling blights and to provide essential Molybdenum for plant growth where soils have been found to be deficient in available Molybdenum. Molybdenum helps the nodule bacteria and plants make more efficient use of nitrogen. It is prepared for use directly in the planter box, thereby eliminating seed handling to have seed treated.

A non-oil lubricant has also been added to help prevent cracking and splitting of the seed so they will flow easily and evenly from the planter box.

This material provides adequate coverage of seed and any excess flows with the seed into the furrow, giving additional protection against soil-borne diseases.

RECOMMENDATIONS

Use GRO BEAN as a planter box treatment at the rate of 3 ounces per bushel of seed. Plant soybeans at the rate of at least one bushel per acre, or the amount of Molybdenum applied to each acre will not be adequate.
