PESTICIDE DISPOSAL: Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

GENERAL INFORMATION: 912 HERBICIDE is useful for selective post-emergent weed control, particularly for grassy weeds. It is a combination of herbicide and surfactants. It is unnecessary to add any other surfactant to the spray solution. Best results are obtained on young, actively growing weeds at air temperatures above 70°F.

MIXING INSTRUCTIONS: 912 HERBICIDE must be thoroughly dissolved. Fill the spray equipment reservoir about half full with water and add the required amount of herbicide with agitation. Finish filling the reservoir with water and apply. After use, clean equipment thoroughly by flushing with water. Do not store spray solution in tanks for a prolonged period.

CITRUS-BEARING AND NON-BEARING (Except Florida): 912 HERBICIDE is useful as a directed application in citrus orchards, for the following crops: orange, grapefruit, tangerine, lemon, and lime orchards. For this label, the term "non-bearing" is defined as a crop which is not expected to bear fruit for at least one year. It should be applied at the rate of 1/3 to 2/3 gallon per acre.

Mix 912 HERBICIDE at the rate of 1/3 gallon in 50 gallons of water. Apply as a directed spray in interspaces and around base of trees. Spray unwanted vegetation to just short of run-off. If regrowth occurs, reapply as required; however, do not exceed 3 applications per year. Do not allow spray solution to contact fruit, leaves, stems or bark. Use a shield, if necessary, for nursery plantings or young trees.

COTTON: 912 HERBICIDE is useful as a directed spray application to weeds in cotton for post-emergent control of grasses and broadleaved weeds, including barnyardgrass, crabgrass, cocklebur, Dallisgrass, foxtail, goosegrass, Johnsongrass, morningglory, nutsedge, pigweed, puncturevine, ragweed, sandbur, and watergrass.

912 HERBICIDE should be applied with a low volume sprayer having satisfactory pumping and bypass action. Nozzles should be placed so as to give good coverage of the weeds and grasses. Proper coverage is very important. Mix at a rate of 3 pints of 912 HERBICIDE in 50 gallons of water to form the spray solution.

PREPLANT APPLICATION: If planting of cotton has been delayed and weeds have emerged, use one preplant application. Apply the spray solution at a broadcast rate of 40 gallons per acre. Cotton may be planted immediately following the preplant application.

DIRECTED APPLICATION: Direct the spray solution to the base of the cotton plant. Nozzles should be placed so as to avoid spraying the cotton foliage, but to give good coverage of the weeds and grasses. Apply the spray solution at a broadcast rate of 40 gallons per acre. For band application, apply at a rate of 1 gallon of the spray solution per 1 inch of band width to be treated on the cotton grown in 40 inch rows. A second application may be required. Time the second application, if necessary, about 1 to 3 weeks after the first application.

Slight burning and a reddish discoloration of the cotton leaves may occasionally occur following the recommended treatment, but the cotton plant will develop normally.

Apply only when cotton is 3 inches high to first bloom. Do not apply after first bloom. Do not feed treated foliage to livestock or graze treated fields.

LAWN AND ORNAMENTAL TURF: 912 HERBICIDE is useful for the control of bahiagrass, barnyardgrass, chickweed, smooth and large crabgrass, dallisgrass, goosegrass, nutsedge, sandbur, and wood sorrel with little or no injury to good lawn grasses. On new lawns, do not treat until after three mowings. Good grasses may be temporarily discolored. Zoysia, bluegrass, and bermuda are quite tolerant. Do not use on St. Augustine or centipede. Mow lawns 1 to 1 1/2 inches high before treatment. Mix 1 1/2 fluid ounces (3 tablespoons) of 912 HERBICIDE in 5 gallons of water and apply to an area of 1,000 square feet. Spray thoroughly to wet all undesirable plants. Repeat applications, 10 to 14 days apart, may be needed for good control. Do not apply with hose-end applicators.

AGRICULTURAL PLANTINGS: 912 HERBICIDE is useful as a directed application in non-bearing grape vineyards and in non-bearing deciduous fruit, nut and citrus orchards, for the following crops: almond, apple, apricot, cherry, grapefruit, lemon, lime, orange, peach, pear, plum, prune, and tangerine orchards. It should be applied at the rate of 1/3 to 2/3 gallon per acre.

Mix 912 HERBICIDE at the rate of 1/2 gallon in 50 gallons of water. Apply as a directed spray in interspaces and around bases of trees or vines. Spray unwanted vegetation to just short of run-off. If regrowth occurs, reapply as required. However, do not exceed 3 applications per year.

Do not allow spray solution to contact leaves, stems, or bark. Use a shield, if necessary, for nursery plantings or young trees. Do not apply around trees or vines from which fruit will be harvested within one year of treatment.

NON-CROP: 912 HERBICIDE is useful for controlling crabgrass, cocklebur, dallisgrass, goosegrass, Johnsongrass, morningglory, nutsedge, pigweed, ragweed, watergrass, and similar weeds on drainage ditchbanks, rights-of-way, and storage yards.

Mix 912 HERBICIDE at the rate of 2 quarts in 50 gallons of water. Spray the unwanted vegetation thoroughly to the point of run-off. Any spray equipment that gives good coverage may be used. If regrowth occurs, retreat as required.
