FLUOMETURON 80DF

For weed control in cotton

ACTIVE INGREDIENT

Fluometuron [1,1-dimethyl-3-(alpha, alpha, alpha,-trifluoro-m-tolyl) urea].....	78.02%
Related compounds.....	1.98%
INERT INGREDIENTS.....	20.00%
Tot. 100.00%	

STOP-READ LABEL BEFORE USING.

KEEP OUT OF REACH OF CHILDREN  
WARNING

STATEMENT OF PRACTICAL TREATMENT

- IF IN EYES: Immediately flush with large amounts of water. Get medical attention if irritation persists.
- IF ON SKIN: Wash affected skin areas thoroughly with soap and water. Get medical attention if irritation persists.
- IF SWALLOWED: Drink water and induce vomiting by placing fingers at back of throat. Call a physician, hospital, or Poison Control Center immediately.
- IF INHALED: Move subject to fresh air. Get medical attention.
- NOTE TO PHYSICIAN: If the patient has ingested fluometuron, induce emesis or lavage stomach. Administer a saline laxative and supportive treatment.

See additional PRECAUTIONARY STATEMENTS on side panel.

EPA Reg. No. 9779-311

EPA Est. No. 9779-AR-13

**PRECAUTIONARY STATEMENTS**  
**WARNING**  
**HAZARDS TO HUMANS AND DOMESTIC ANIMALS**

Causes eye irritation. Wear goggles, face shield or safety glasses. Do not get in eyes, on skin, or on clothing. Harmful if swallowed, inhaled or absorbed through the skin. Wear protective clothing as this product may cause skin rash after repeated exposure. Avoid breathing vapors or spray mist. Wash thoroughly with soap and water after handling. Remove contaminated clothing and wash before reuse.

**ENVIRONMENTAL HAZARDS**

Do not apply directly to water or wetlands. Do not contaminate water when disposing of equipment washwaters.

---

**DIRECTIONS FOR USE**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product through any type of irrigation system.

---

**STORAGE AND DISPOSAL**

**DO NOT CONTAMINATE WATER, FOOD OR FEED BY STORAGE OR DISPOSAL.**

**STORAGE**

Store in a dry location away from children, animals, foods, feeds, seeds, or other agricultural chemicals. Handle in accordance with information given under PRECAUTIONARY STATEMENTS. In the event of spillage or leakage, soak up with absorbent clay, sand, sawdust, or other absorbent material. Scrape up and dispose of in accordance with information given under DISPOSAL. Repackage and relabel useable product in a sound container. In case of fire or other emergency, report at once by toll-free telephone to 800-424-9300.

**DISPOSAL**

**PESTICIDE DISPOSAL:** Pesticide wastes may be toxic. Improper disposal of unused pesticide, spray mixture, or rinse water is a violation of Federal law. If these wastes cannot be used according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance in the proper disposal methods.

**CONTAINER DISPOSAL:** Triple rinse (or equivalent). Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill or by incineration, or if allowed by state and local authorities, by burning. Stay out of smoke from burning jugs.

## GENERAL INFORMATION

FLUOMETURON 80DF is effective for annual grass and annual broadleaf weed control in cotton. FLUOMETURON 80DF applied according to label directions will control the following annual weeds:

### ANNUAL BROADLEAF WEEDS

Spurred anoda	Prickly sida (teaweed)
Cocklebur	Purslane
Florida pusley	Ragweed
Groundcherry (Wright)	Sesbania
Jimsonweed	Sicklepod
Lambsquarters	Smartweed
Morningglory	Tumbleweed
Pigweed	

### ANNUAL GRASS WEEDS

Barnyardgrass	Foxtail
Crabgrass	Goosegrass
Crowfootgrass	Ryegrass
Fall panicum	Signalgrass ( <u>Brachiaria</u> )

Established perennial weeds such as Johnsongrass from rhizomes is not controlled by a 2.5 lb./acre rate.

## APPLICATION PROCEDURES

**BAND TREATMENT:** For band applications, the following formula may be used to calculate the amount of FLUOMETURON 80DF required:

$$\frac{\text{band width (inches)}}{\text{row width (inches)}} \times \text{broadcast rate per acre} = \text{amount needed per acre}$$

**EQUIPMENT:** Thoroughly clean sprayer prior to use. Do not use a sprayer contaminated with 2,4-D or other materials as crop damage or sprayer clogging may result.

Use properly calibrated conventional spray equipment that will apply spray uniformly and has hydraulic or mechanical agitation, except in California or Arizona where only mechanical agitators are recommended. Screens in nozzles, in suction, and in-line strainers should be no finer than 50-mesh. Use a pump with capacity to maintain 35-40 psi at the nozzles. If hydraulic agitation is used, the pump should also provide sufficient agitation in the tank to keep the mixture in suspension. Avoid leaving spray mixture in tank without constant agitation. If bypass agitation is used, it should terminate at the bottom of the tank to minimize foaming. Wash sprayer thoroughly with clean water immediately after use.

Apply in a minimum of 10 gallons per acre for preplant incorporated or pre-emergence applications, or apply in a minimum of 20 gallons per acre for postemergence application.

**BEST AVAILABLE COPY**

**MIXING INSTRUCTIONS:** Fill spray tank 1/2 full with water or nitrogen solution. Start agitation. Pour FLUOMETURON 80DF directly from the container into the partially filled spray tank. If FLUOMETURON 80DF is to be tank mixed with another herbicide, add that product after the FLUOMETURON 80DF is thoroughly mixed. Add the rest of the water or nitrogen solution. Agitate during mixing and application to maintain uniform suspension.

To determine compatibility, add two teaspoons of FLUOMETURON 80DF to one pint of nitrogen solution, equivalent to 2.5 pounds in 25 gallons. If using other application rates, adjust compatibility test rates proportionally. Stir or shake thoroughly. Let stand 5 minutes. If it remains mixed or can be remixed readily, the mixture is compatible. If FLUOMETURON 80DF settles out when mixed with a nitrogen solution, a compatibility agent at 1 to 3 pints per 100 gallons fertilizer may improve compatibility. Add 1/8 to 3/8 teaspoon of the compatibility agent to determine effectiveness.

#### Cotton

FLUOMETURON 80DF may be applied as a preemergence treatment to the surface of the soil, or lightly incorporated immediately after planting, or as a directed, semidirected, or over-the-top postemergence application. For preemergence treatment only, FLUOMETURON 80DF may be tank-mixed with most liquid nitrogen fertilizers. FLUOMETURON 80DF may be combined with other herbicides in cotton as directed in the section, "Combinations."

FLUOMETURON 80DF is most effective when used as follows:

1st Application: Preemergence broadcast. See Preemergence Treatment below.

2nd Application: Postemergence, directed, semidirected, or over-the-top when cotton is 3-6 inches high. See Postemergence Treatments below.

3rd Application: If needed, postemergence, directed, or semidirected, at layby (last normal cultivation), using no more than 1.25 pounds per acre.

#### Preemergence Treatment

Apply FLUOMETURON 80DF at a rate of 1.25 to 2.5 pounds per acre. On light silt and sandy soils low in organic matter, use the lower rate.

-FLUOMETURON 80DF may be applied to the surface of the soil or lightly incorporated into the soil after planting cotton.

#### Preplant Incorporated Use (Arizona, California, and New Mexico)

FLUOMETURON 80DF may be applied preplant as a broadcast spray at 2.0 pounds per acre after the beds for preplant irrigation have been formed. Apply before the beds are dragged off (using a bed shaper set to remove 1 to 2 inches from bed) in preparation for planting. Furrow irrigation should precede the application and planting should follow as soon as possible. Plant into untreated soil after drag-off and return treated soil to the beds when furrows are reformed. Do not allow furrow irrigation water to pond over the beds.

### Postemergence Treatments

FLUOMETURON 80DF may be applied postemergence to cotton but preemergence to weeds, or postemergence to both cotton and weeds. FLUOMETURON 80DF should be applied at rates of 1.25 to 2.5 pounds per acre. Apply as a directed, semidirected, or over-the-top spray. FLUOMETURON 80DF may be applied to cotton plants at any stage of growth from 3 inches high to layby. Use the higher rate when applying postemergence to weeds; weeds should be 2 inches high or less. Use of a surfactant that is approved by EPA for use on food and feed crops and is compatible with FLUOMETURON 80DF when applied to cotton may enhance the postemergence herbicidal activity of FLUOMETURON 80DF. The surfactant rate should not exceed 0.5% of the carrier volume (1 pint per 25 gallons of water).

Rainfall that is sufficient to germinate seeds or for growing crops is adequate to activate the herbicidal activity of FLUOMETURON 80DF. Where dry weather conditions prevail, the herbicidal activity of FLUOMETURON 80DF may be delayed or reduced. Cultivate if necessary.

Do not make more than three applications of FLUOMETURON 80DF to the same crop or field in any one year. Do not plant crops other than cotton or sugarcane within 6 months of the last application of FLUOMETURON 80DF or injury may result.

The use of FLUOMETURON 80DF as a preemergence or early postemergence application, following the use of a systemic insecticide at planting, may result in injury to cotton.

West Texas only: Do not use FLUOMETURON 80DF on sandy, loamy sand, or fine sandy loam soils. Do not use FLUOMETURON 80DF on cotton planted in furrow.

Arkansas, Louisiana, and Mississippi only: Use 1 pound of FLUOMETURON 80DF per acre on sandy loam soils low in organic matter.

Arizona, California, and New Mexico only: Cotton, corn, and grain sorghum can be planted the next spring. Do not plant treated areas to other crops until one year after last application. Do not use on sandy or coarse-textured soil of less than 1% organic matter.

Do not apply within 60 days of harvest.

Do not feed foliage from cotton plants or gin trash to livestock.

### Combinations for Use on Cotton

Trifluralin or Treflan® EC: Use in a tank mixture with FLUOMETURON 80DF (all areas except Arizona and California) or before an overlay with FLUOMETURON 80DF in cotton for control of all weeds listed on both labels.

For the tank mixture, follow soil preparation and incorporation procedures for Trifluralin or Treflan EC. Apply FLUOMETURON 80DF + Trifluralin or Treflan EC tank mix rates specified below in a minimum of 15 gallons of water per acre.

UNAVAILABLE COPY

**FLUOMETURON 80DF + Trifluralin or Treflan EC Tank Mixture  
(except Arizona and California).**

Soil texture	Broadcast rates per acre	
	FLUOMETURON 80DF	Trifluralin or Treflan EC
Sand, loamy sand, sandy loam	1.25 pounds	1 pint
Loam, silty clay loam*, silt loam, silt, sandy clay loam*	2.0 pounds	1.5 pints
Clay, clay loam, silty clay loam*, silty clay, sandy clay, sandy clay loam*	2.5 pounds	2 pints

\*Silty clay loam and sandy clay loam are transitional soils. If these soils are predominately sand or silt, they are usually classified as medium-textured soils. If predominately clay, they are classified as fine-textured soils.

For the overlay, apply FLUOMETURON 80DF as a preemergence soil surface treatment as recommended on this label at 1.25 to 2.5 pounds per acre after a preplant soil incorporated treatment of Trifluralin or Treflan EC. Apply Trifluralin or Treflan EC as recommended on the label at 1 to 2.5 pints per acre.

Do not use the tank mix in Arizona and California. Do not apply the tank mix of FLUOMETURON 80DF + Trifluralin or Treflan EC in liquid fertilizer. Refer to the Trifluralin or Treflan EC label for directions, precautions, and limitations for use of that product, as well as the directions, precautions, and limitations on this FLUOMETURON 80DF label.

**Prowl®:** Apply FLUOMETURON 80DF as a preemergence surface treatment as recommended on this label at 1.25 to 2.5 pounds per acre after a preplant soil-incorporated treatment of Prowl for control of all weeds listed on both labels. Apply Prowl as recommended on its label at 1-3 pints per acre. Refer to the Prowl label for directions, precautions, and limitations for use of that product.

**DSMA or MSMA:** FLUOMETURON 80DF may be tank-mixed with DSMA or MSMA and applied as a directed spray to cotton from three inches high to first bloom. Use the broadcast rate of 1.25 to 2.5 pounds per acre and the necessary amount of DSMA or MSMA plus 0.5% (1 pint per 25 gallons) of a surfactant that is approved by FDA for use on food and feed crops and is compatible with FLUOMETURON 80DF + DSMA or FLUOMETURON 80DF + MSMA when applied to cotton. When using this mixture, do not allow spray to contact cotton foliage. Do not graze treated areas or feed treated forage or gin trash to livestock. Adhere strictly to the dosage, precautions and limitations of the labels of the products.
