HOW TO USE Iprodione R FLOWABLE FUNGICIDE

Partially fill the spray tank with clean water. Measure the required amount of Iprodione R Flowable Fungicide and pre-mix with a small volume of water, add this to the tank. Agitate to ensure thorough mixing while filling tank with remaining water. Maintain agitation during application and apply with properly calibrated application equipment. Do not allow spray mixture to stand overnight or for prolonged periods, as some chemical breakdown may occur, particularly in water with a high pH. The spray solution should be buffered to a pH of 5.0-7.0. A high quality, nonionic spreader, such as Activate Plus™ or Sensor pH™ can be used as a spray tank additive. Iprodione R should be added to the tank prior to the addition of any adjuvant. Consult the adjuvant label or manufacturer for crop tolerance and safety information when used with Iprodione. Do not apply through any type of irrigation system.
