Not for use or sale in Nassau and Suffolk Counties in the State of New York.

General

SPROUT-GARD is a tree growth regulator product designed to inhibit sprouting of new growth from the pruning of deciduous trees in and around power lines and other vegetation management situations. One application will retard sprouting of new growth for many hardwood species (see list below), and aid in the suberization of the wound to increase the time interval between pruning cycles. Correct tree pruning and trimming practices should always be followed for optimum results.

Treatment

SPROUT-GARD is a ready-to-use formula that is applied directly to the fresh cuts on the tree at the time of pruning. Remove cap and attach SPROUT-GARD directly to sprayer system. Apply as a coarse spray (spray to wet, covering entire cut). Spray SPROUT-GARD on the new cuts on the sides of pruned trees that face the power line. SPROUT-GARD may be applied any time of the year that pruning operations are done. Do not apply more than 3 gallons of product (1.5 lbs. a.i.) per acre.* As a general guide this would be no more than 48 trees per 8/10 running mile, using no more than 8 oz. of product per treated tree.

*In New York State do not apply more than one gallon (.5 lb. a.i.) per acre per year

404

Used as directed SPROUT-GARD is effective in inhibiting the regrowth of pruned branches of the follow tree species:
