**General**

SPROUT-GARD AR is a vegetation growth inhibitor product designed to inhibit sprouting of new growth from the pruning of deciduous trees in and around power lines and other vegetation management situations. One application will retard sprouting of new growth for many hardwood species (see list below), and aid in the suberization of the wound to increase the time interval between pruning cycles. Correct tree pruning and trimming practices should always be followed for optimum results.

**Treatment**

SPROUT-GARD AR is applied directly to the fresh cuts on the tree at the time of pruning. Remove cap and spray thoroughly covering entire cut. Spray SPROUT-GARD AR on the new cuts on the sides of pruned trees that face the power line. SPROUT-GARD AR may be applied any time of the year that pruning operations are done. Do not apply more than 3 gallons of product (1.5 lbs. a.i.) per acre.\* As a general guide this would be no more than 48 trees per 8/10 running mile, using no more than 8 oz. of product per treated tree.

- Bigtooth Aspen (*Populus grandidentata*)
- White Ash (*Fraxinus americana*)
- Green Ash (*Fraxinus pennsylvanica*)
