

PUROGENE

Directions for Use

For General Use:

1. In individual ice flaking and cubing machines to inhibit bacterial slime build-up..... 20 ppm
2. In ice, as a sanitizer, made from potable water for use in drinking glasses and cups... 20 ppm
3. In water for the improvement of taste and odor..... 10 ppm

For Commercial Use:

1. In ice plants to inhibit bacterial slime build-up on ice making equipment..... 40 ppm
2. As a bacteriostat in ice..... 40 ppm

For Hospital and Institutional Use:

1. As a sanitizer in ice, made from potable water, while in ice storage equipment..... 20 ppm

For measuring the above dilutions see chart below:

- 10 ppm—2/3 oz. (.66 oz.)—4 teaspoons per 10 gal. water.
20 ppm— 1 1/3 oz. (1.33 oz.)—8 teaspoons per 10 gal. water.
40 ppm—2 2/3 oz. (2.66 oz.)—16 teaspoons per 10 gal. water.

Make sure your family pool is always pure and sparkling

Just add a few ounces of easy-to-use Antho-Pure Chlorine Concentrate to your pool every other day.

DIRECTIONS

Antho-Pure Chlorine Concentrate will have maximum effectiveness after pool water has been properly conditioned. If pool is newly filled or if a different method of chlorination has been used, prepare pool by using Antho-Pure Conditioner first.

CONDITIONING

1. Backwash or clean filter and set for eight hours continuous operation. (With sand and gravel filters—do not add alum for 24 hours.)
2. Test pH level with a test kit. Adjust the pH to 7.4-7.6. Add Soda Ash or Bicarbonate of Soda if pH is below 7.4—if it is above 7.6 add Antho-Pure Dry Acid.
3. Add Antho-Pure Conditioner in the amount shown in table. With filter on, main drain off, and skimmer valve open, add the Antho-Pure Conditioner slowly into the skimmer, breaking up lumps that may form.
4. Test in 1 to 2 hours; repeat adjustment of pH to 7.4-7.6 as in step 2.
5. Super-Chlorinate: Add one gallon of liquid pool chlorine (10-14% sodium hypochlorite by

weight) per 20,000 gallons of pool water. Super-chlorination should always be done when there are no swimmers in the pool and no one should be allowed in the pool until the chlorine residual has dropped below 2.0 ppm. Do not allow the residual to go below 0.6 ppm.

6. Next day check chlorine residual. If it has not retained at least an 0.8 ppm residual, super-chlorinate again as in step 5, with one gallon of liquid pool chlorine per 20,000 gallons of pool water.

AFTER CONDITIONING

7. Add Antho-Pure Chlorine Concentrate every other day to maintain a 0.6 ppm residual. See chart for amount.

ANTHO-PURE CHLORINATOR: Holds 20 pounds of Antho-Pure Chlorine Concentrate. Adds measured amount daily. Follow Chlorinator instructions for setting selector dial.

FOR AUTOMATIC LIQUID FEEDERS: Prepare a stock solution by dissolving 8 ozs. Antho-Pure Chlorine Concentrate in 5 gallons of water. Adjust to maintain a 0.6 to 1.0 ppm residual.
