NET WEIGHT

Our Ames A-1 Brand Rat and Mouse Killer is a powerful, fast-acting poison which the rat and mouse will eat. It is safe for children, pets, and domestic animals. It is a dry, free-flowing powder that can be placed in bait stations, traps, or other places where the rodent will feed. For maximum results, use the product in a dry, well-ventilated area. Do not use in areas where there is a high humidity or where the rodent may not feed. For more information, contact your local health department or the manufacturer. This product is a potent poison and should be handled properly.

AMES A-1 BRAND RAT AND MOUSE KILLER is a powerful, fast-acting poison which the rat and mouse will eat. It is safe for children, pets, and domestic animals. No messiness—No pre-baiting—Inexpensive & easy to use

100% SATISFACTION OR YOUR MONEY BACK.

CAUTION: Keep Out of Reach of Children

If swallowed by humans, domestic animals, or pets, this material may reduce the clotting ability of the blood and cause bleeding. In such case, intravenous and oral administration of Vitamin K combined with blood transfusions may be indicated, as in the case of hemorrhage caused by over-doses of bishydroxycoumarin.

Mfg. By AMES A-1 CHEMICALS, Ames, Iowa, U.S.A.

Ames A-1 Brand Rat and Mouse Killer is Resistant to Insect Infestation.

**DIRECTIONS FOR USE OF
3-I BRAND WATER SOLUBLE WARFARIN**

FOR RATS: Mix the contents of this package with one gallon of clean water. *Do Not Attempt To Dissolve Small Silica Particles* which remain on bottom of jar. Place a chicken water fount over the mouth of jar and turn over quickly. Set fount on a clean level surface where rats are accustomed to feed. Discard water in which mold or filth is noted. Keep fount clean and well supplied at all times. Do not place fount where freezing may occur. Protect founts from children or pets and domestic animals.

FOR MICE: Follow the same general directions as for rats except bait placements may be smaller and more placements should be made. Mice are more difficult to control than rats and complete control may take a longer period of baiting. Protect founts from children or pets and domestic animals.

IMPORTANT: *Baiting Should Continue Until Complete Lack Of Feeding Is Noted. This Should Be From 5 To 14 Days.* It is recommended that 3-I Warfarin Prepared Baits be used in conjunction with this product, especially where there is an ample supply of fresh water.

CAUTION: 3-I Water Soluble Warfarin contains as its active ingredient an anti-coagulant chemical which if taken accidentally by human, domestic animals, or pets may reduce the clotting of the blood and serious hemorrhage may result. In case baits are accidentally swallowed, give a tablespoon of salt in a glass of warm water and repeat until vomit is clear. Call a physician immediately.

NOTE FOR PHYSICIAN: When a human has been known to have accidentally ingested 3-I Water Soluble Warfarin, blood transfusions combined with intravenous injections and oral doses of Vitamin K are indicated as in the case of hemorrhage caused by overdose of Dicumarol.

CAUTION: Keep out of reach of children
