

CADIE CAT FLEA-KILL COLLAR

... AND HOW IT WORKS

Fleas can't live very long without moisture from the eyes, ears and mouth, and although they are blood suckers, they still have to have this moisture, confirming the answer to why dogs and cats have more fleas than fleas in hot dry weather, and in a warm house in the colder months.

When a collar is placed around a pet's neck, no flea can get by without first going over or under the flea kill collar. All that is necessary is for a flea to touch the collar with one foot and in a matter of minutes paralysis sets in through the nerve system and the flea is paralyzed to the extent that he can no longer hang on to the pet, thus falls off from the cat and dies. There are many good flea insecticides on the market for dogs & cats, but this method would be a full time job and not feasible man or cat. Flea kill collars eliminate all this fuss and bother with effective results.

When a cat is heavily infested with fleas he will have from 50 to 200 fleas on him and you will have another 2,000 or 3,000 fleas in your furniture, rug, ceiling and in the grass and dirt outside a home.

IMPORTANT

When cats are infested with fleas you can not expect the collar to kill all of the fleas in and around your home in 2 or 3 weeks. You can however speed up the ridding of the nests by vacuum powder insecticide, dusting in and under your sofa's belt, under the stuffed cushions in your furniture and out of the cellar floor 18 in. from the cellar wall and around the cellar. After you have rid your home of 75% of fleas, the flea kill collar will automatically keep the flea infestation under control. If a cat has 100 fleas on his neck of these fleas one female which are constantly producing eggs. If we kill only one female to each male you have the collar will have already destroyed 6 to 8 to 15 fleas. If the collar kills an average of only 10 fleas per day of which 8 are females, the collar will have killed 100 to 144 fleas on the average 24 hours per day.

The flea kill collar works effectively 24 hours per day for several weeks, after which the collar is cut off and replaced with a new one.

Please test on your cat, consider safety of young animals. Do not allow children to play with these collars. Do not use any other pesticide with the collar as with.

CADIE CAT FLEA-KILL COLLAR

WITH LINDANE

Kills Fleas EASY!

No Fuss...

No Muss...

So easy to

Put on!

Adjustable

.... Works

24 hours

a day

ACCEPTED WITH COMMENTS

DIRECTIONS

1. Remove the collar from its protective plastic bag. It is important to remove the collar from its protective plastic bag before use. This will prevent the collar from becoming brittle and breaking.

2. Place the collar around the neck of the cat. Make sure the collar is snug but not too tight. The collar should be able to slide up and down the cat's neck easily.

3. Once the collar is in place, it is ready to begin killing fleas. The collar will begin to kill fleas within 24 hours of being applied.

After the collar has been applied, it is important to keep the cat away from any water or soap for at least 24 hours. This will prevent the collar from becoming brittle and breaking.

It is also important to keep the collar away from any heat sources, such as a fireplace or heater, as this can cause the collar to become brittle and break.

If the collar becomes brittle and breaks, it is important to replace it with a new one.
