tooth rot and soft tissue lumpy jaw; nutritional source of iodine.

PESTICIDALLY ACTIVE DRUG INGREDIENT:

Phenothiazine*.....1.25%

INERT ** INGREDIENTS.....98.75%

Total 100.00%

(OTHER) ACTIVE DRUG INGREDIENT:

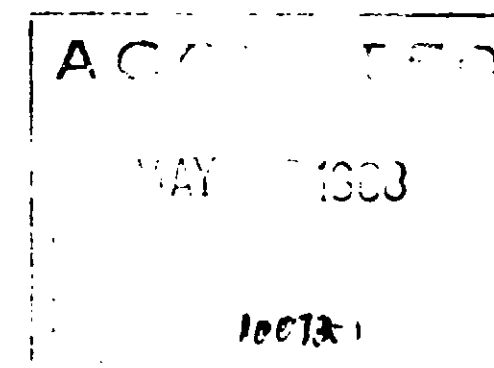

Ethylene diamine dihydroiodide......035%

*Biologically assayed

** Refers only to ingredients which are neither insecticides nor drugs.

GUARANTEED ANALYSIS:

Crude Protein not less than	18.00%
Crude Fat not less than	1.00%
Crude Fiber not more than	5.00%
Calcium (Ca) not more than	7.00%
Calcium (Ca) not less than	4.00%
Phosphorus (P) not less than	1.75%
Salt (NaCl) not more than	15.00%
Salt (NaCl) not less than	13.00%
Ash not more than	45.00%
Vitamin A, Potency not less than	11,000 USP Units Per Lb.

INGREDIENTS

Concentrated milk, hydrolyzed poultry feathers, alfalfa meal, fish meal,
molasses, salt, magnesium carbonate, calcium carbonate, grain sorghum,
flour, defluorinated phosphate, low fluorine rock phosphate, fish meal,
meat and bone meal, bentonite, rice bran, cane molasses,
Vitamin A supplement, Vitamin A & D₃ supplement, manganese oxide,
zinc oxide, iron oxide, cobalt carbonate, copper oxide, mineral
and artificial flavors added.

FEEDING DIRECTIONS

Self Feed 3/4 oz. of Vita King Fly Control Block per day per head
100 lbs. of body weight. (Be sure to put out an ample supply of
blocks -- at least one block for every 10 head). Locate blocks
near the animals' water, or near their feeding area. Keep plenty
of Vita King Fly Control Blocks available. If the supply of blocks
runs out, do not expect to control fly breeding.

Do not feed any other salt or mineral. Vita King Fly Control Blocks contain all the additional salt and mineral required by the animal, when consumed at the proper rate.

The active ingredient of Vita King Fly Control Blocks is a biologically tested agent against the horn fly, and guaranteed by the manufacturer to prevent the breeding of horn flies on the skin of the horn flies in the manure of treated cattle, and does not affect the fly.

For maximum protection against horn flies, cattle should be sprayed at the start of the fly season, and fed Vita King Fly Control Blocks continuously, beginning several weeks before the fly season and until all adult horn flies have disappeared in the fall. Vita King Fly Control Blocks prevent the breeding of horn flies and face flies in the manure of treated cattle, but does not affect any existing adult flies.

CAUTION

Keep out of the reach of children.

Do not feed to lactating dairy animals.

Occasional sensitivity to phenothiazine has been reported in cattle.

Net Wt. 22.23 lbs.
