

2,4,5-T LOW-VOLATILE ESTER

Brush and Wood Killer

For control of woody plants and noxious weeds in established grass pastures*, forest management areas, rights of way, range land, roadsides, wastelands and other areas where sprays cannot damage valued plants. This material is recommended where the growth to be controlled is comprised chiefly of species susceptible to 2,4,5-T. In mixed stands containing species susceptible to both 2,4,5-T and 2,4-D a combination of these materials is more satisfactory.

ACTIVE INGREDIENT

Isooctyl ester of 2,4,5-Trichlorophenoxyacetic acid 64.2%

INERT INGREDIENTS

35.8%

*Equivalent to 44.52% by weight of 2,4,5-Trichlorophenoxyacetic acid or not less than 4 lbs. of 2,4,5-T per acre per application at 58 F.

CAUTION: Avoid contact with eyes, nose, mouth, and skin. Do not breathe dusts or mists. In case of contact flush eyes immediately with clean water. Avoid breathing dusts or mists. Do not spray or drift to contact desirable plants. Among crops highly susceptible to 2,4,5-T are cotton, tobacco, black oil seed, beans, tomatoes, melons, other vegetables, grapes, fruit trees and some ornamentals. (Coarse sprays are not recommended for fine mist sprays.) It is difficult to completely clean 2,4,5-T from sprayers or other equipment, therefore do not use 2,4,5-T sprayers and other equipment for purposes where clean lines and units of this equipment may cause injury. Do not re-use shipping containers. Do not use for spraying and blowing. Avoid contact with water intended for drinking and domestic use. Do not treat with herbicides, sprays, fertilizers, insecticides or fungicides. Various forms of plants may be susceptible plants in the vicinity. Do not store in a fire hazard area. Do not use or store near heat or fire.
