

TURF FUNGICIDE

DYRENE®

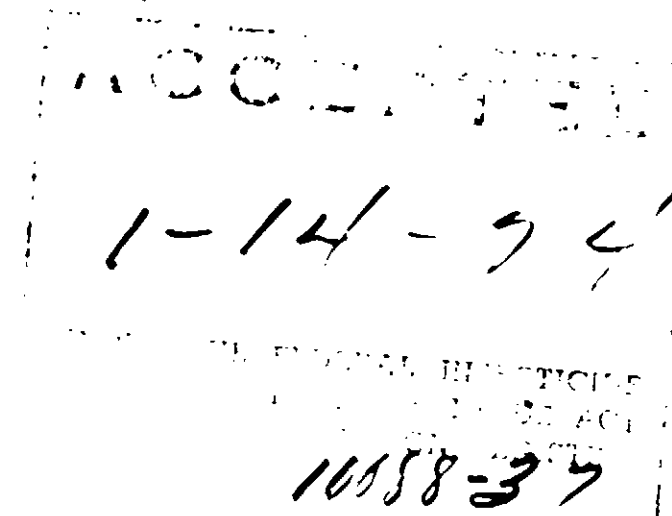

DIRECTIONS FOR USE

TURF FUNGICIDE effectively protects grasses from various destructive diseases. Complete and thorough coverage of area is necessary for satisfactory control. For a preventive program begin applications before diseases appear and repeat treatments as needed, usually at intervals of 10 to 14 days, except during extended periods of cool, moist conditions, when applications every 7 days may be advisable. The spray program should be continued through the spring and summer months.

For control of snow mold, apply TURF FUNGICIDE at lower specified rate after the first killing frost in the fall. A second application should be made when the lawn is free of snow in mid-winter, and this should be followed by a third application after the final melting of snow in late winter or early spring.

Schedule applications in accordance with local conditions. Consult your State Agricultural Experiment Station or Extension Service for specific use information and for State regulations which may contain additional restrictions or requirements.

NET WEIGHT:

25% WETTABLE POWDER
FOR CONTROL OF TURF DISEASES

ACTIVE INGREDIENT:

4,6-dichloro-N-(2-Chlorophenyl)-
1,3,5-triazin-2-amine25%

INERT INGREDIENTS:75%
100%

*U.S. Patent No. 2,720,480
Canadian Patent No. 546,027

EPA Reg. No. 10088-37

STOP — READ THE LABEL BEFORE USE

CAUTION

(See rear panel for warning
statements)

KEEP OUT OF REACH OF CHILDREN
STORE IN A COOL, DRY PLACE.
