DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

FOR CONTROL OF NESTS OF WASPS, YELLOW JACKETS AND HORNETS: The best time to spray the nest is in the early morning or early evening, when air temperature is cooler and most insects are in the nest and little activity is observed around the nest opening. Spray only if the air is still. Stand at a safe distance from the nest, not directly under it. Hold container upright at arms length, point the actuator at the nest and spray in the opening of the nest first. Then spray the rest of the nest until it is saturated. Treated insects may fall out of the nest and die. Wait 48 hours before removing the nest. Hose off foliage of desirable plants that were contacted with spray.

This product may stain or adversely affect vinyl, painted, and plastic surfaces. Avoid application to asphalt roofing shingles as staining may occur. Before using in areas where spray may contact these surfaces, test in an inconspicuous area and re-check in a few hours.

STORAGE AND DISPOSAL

STORAGE:
