GENERAL INFORMATION

Du Pont "Ammate" X Weed and Brush Killer is highly effective for killing undesirable woody plants and as a contact spray for control of weeds and grasses. Temporary non-productivity of soil may be caused by heavy applications of "Ammate" X; this condition usually disappears in the "over-winter" period.

Some species of woody plants and perennial weeds are difficult to control, and retreatment may be necessary if regrowth occurs.

"Ammate" X is water soluble, non-volatile, and non-flammable. It may be applied from a sprayer or sprinkling can. Direct sprays away from lawns and desirable plants to avoid injury. Coarse sprays are less likely to drift. It is non-selective; do not apply to, or drain, or flush equipment on desirable plants or vegetation.

IMPORTANT: Wash sprayer thoroughly after use to remove all "Ammate" X and to reduce corrosion. "Ammate" X absorbs moisture readily; keep package tightly closed.

Du Pont AMMATE X

ACTIVE INGREDIENT:
Ammonium Sulfamate 95 %
INERT INGREDIENTS 5 %
TOTAL 100 %

CAUTION: Keep out of reach of children!

*Registered trademark of E. I. Du Pont de Nemours & Co. (Inc.)

AVOID prolonged contact of skin with strong solution of this material.

In case of contact, wash off with plenty of water.

DIRECTIONS

For control of woody plants, such as poison ivy, poison oak, poison sumac, tree sprouts, brambles and other brush, use 1 lb. per gallon of water. Apply as a drenching spray after foliage is well developed. Wet foliage thoroughly. For best results, spray during periods of high humidity. For foliage difficult to wet, add 1/4 teaspoonful of Spreader-Sticker per gallon. Respray if any recovery is noted. The areas to be treated as mentioned above are on locations such as, roadside, fence lines, pastures, range lands, drainage ditches and vacant lots. The amount of "Ammate" X to use should not exceed 1 lb. per 40 sq. ft. and the recommended amount is 1 lb. to 1 gal. of water per 40 sq. ft. For the Control of Woody Plants on Rangelands and pastures use 100 lbs./100 gals. of water per acre. Wet foliage thoroughly. Apply after brush reaches full leaf stage until leaves change color in fall.

TO KILL VEGETATION in driveways, walks, tennis courts and similar locations, use 1 lb. of "Ammate" X per gallon of water for 40 sq. ft. apply uniformly with a sprinkling can or sprayer. The degree of control and duration of effect will vary with weed species, rainfall, temperature and other conditions.

TO PREVENT SPROUTING OF TREE STUMPS: Apply dry "Ammate" X liberally on freshly cut stump surface especially around the outer edge or spray surface thoroughly with solution of 4 lbs. of "Ammate" X per gallon of water.

TO KILL UNDESIRABLE TREES: Make a continuous cut or "frill" around the base of the tree with downward axe strokes, cutting into the sapwood. Apply dry "Ammate" X as a continuous band in the frill, or saturate frill with solution of 4 lbs. of "Ammate" X per gallon of water.

NOTE: 1 lb. is equivalent to 1 3/4 cupfuls.
