

ENVIRONMENTAL PRECAUTIONS

This product is toxic. Treated effluent may not be put back where it will drain into streams, rivers, streams, ponds or public waters without a valid discharge permit. Do not contaminate water, food or feed by storage, disposal or cleaning equipment. Apply only as specified on this label.

DANGER

Corrosive material. May cause severe skin irritation or chemical burns. Do not get in eyes, on skin or on clothing. Do not take internally. Avoid breathing vapors. Do not handle this product in poorly ventilated areas. Wear goggles or face shield and rubber gloves when handling this product. Wash after handling. Do not store or use this product with ammonia, household cleaners, acids or reducing agents. To do so may release hazardous gases.

FIRST AID

External: In case of skin or eye contact, flush with plenty of water for at least 15 minutes. Get prompt medical attention.

Internal: Call physician immediately. Give milk, egg whites or water. Do NOT give vinegar or other acids. Do NOT induce vomiting.

STORAGE AND DISPOSAL

Store in a cool, dry area. Keep out of direct sunlight. Spill procedure: flood affected area with large amounts of water. vacate poorly ventilated areas until odors have dissipated. Empty containers should be thoroughly rinsed and returned to seller. Unusable product or residue should be diluted and disposed of in a sanitary sewer.

GENERAL DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with the labeling.

DIRECTIONS FOR SWIMMING POOL CHLORINATION

For new pools: For new pools or swimming pools, start by adding 10 fluid ounces of this sodium hypochlorite solution for each 3,000 gallons of water. This initial dosage will establish 5 ppm available chlorine by weight.

Pool Maintenance: Keep the pH of the pool water between 7.2 and 7.6 at all times. Add this sodium hypochlorite solution at a rate to maintain an available chlorine residual of between 0.6 to 1.0 ppm. Frequency of additions to maintain this residual will depend upon temperature, sunlight, and the number of swimmers. Use an adequate test kit to make certain the pH and chlorine residual fall within the proper ranges.

DIRECTIONS FOR DISINFECTION OF POTABLE WATER

Sodium Hypochlorite should be fed at a rate to maintain a free chlorine residual as measured by a DPD chlorine test kit of no less than 0.2 ppm and greater than 0.6 ppm throughout the water distribution system. This sodium hypochlorite solution may be diluted in order to facilitate feeding by hypochlorinators. See dilution table. Check residuals frequently with a DPD chlorine test kit. Samplings for bacteria must be conducted in accordance with the National Interim Primary Drinking Water Regulations. Contact your local Health Department for details.

DIRECTIONS FOR SANITIZING AND DEODORIZING FOOD PROCESSING, DAIRY, FARM, HOTEL, RESTAURANT, AND TAVERN EQUIPMENT

Clean and prewash all equipment, utensils and glassware. Rinse thoroughly in clean potable water. Sanitize in a solution of 1 fluid ounce of sodium hypochlorite solution to 5 gallons of water (approximately 200 ppm available chlorine). Immerse in this solution for a minimum of 2 minutes or contact time specified by governing health code. Do not use. Allow equipment to drain and air dry.
