0.05%, Petroleum Solvent 96.95%
*Equivalent to 1.8% Octachloro 4,
7-methylnonachloro and 1.2% related compounds

CONTENTS
ONE QUART

DIRECTIONS FOR USE

Cockroaches (Waterbugs), Ants, Silverfish, Spiders, Household Centipedes: Spray infested areas. Application should be made by coarse spray or paint brush to baseboards, areas around water pipes, cracks and crevices, surfaces beneath and behind cabinets, refrigerators, sinks, stoves and similar areas where insects hide. Also, spray ant trails, door frames and window sills where ants enter premises. Repeat treatment as necessary. Excessive use may affect Asphalt or Rubber Tile. **Carpet Beetles:** Apply to floors and baseboards, into cracks and under carpets where insects may be found. Treat crevices and cracks in closets and infested areas of shelving. Spot treat the infested rugs and carpets. Repeat treatment as required.

FOR SPOT APPLICATION ONLY.

ROSE INSECT SPRAY is compounded from materials found highly successful in the field operations of Rose Exterminator Co. since 1860. Direct contact with the insect is desirable, but not necessary. Good results can be expected by treating surfaces where insects are expected to walk or rest.

ROSE INSECT SPRAY may be applied with a sprayer in a coarse spray or with a paint brush. Make the surface to be treated wet to touch. Allow to dry. Do NOT wash away.
