GOWAN MALATHION 8

276

AGRICULTURAL INSECTICIDE

EMULSIFIABLE LIQUID

ACTIVE INGREDIENT:

Malathion: O,O-dimethyl phosphorodithioate of diethyl mercaptosuccinate

% BY WT.

79.5%

INERT INGREDIENTS

20.5%

TOTAL 100.0%

Contains 8 lbs. malathion per gallon

**KEEP OUT OF REACH OF CHILDREN
CAUTION**

Organophosphate Insecticide

**PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS
CAUTION**

Harmful if swallowed. Avoid breathing of spray mist. Avoid contact with skin. Avoid contamination of feed and food.

NOTE TO PHYSICIAN: Malathion upon use may cause cholinesterase inhibition. Atropine is antidotal.

Use only with adequate ventilation. After using this product indoors, ventilate thoroughly before occupying enclosed spaces.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for category F on an EPA chemical resistance category selection chart.

Applicators and other handlers must wear:

- Long-sleeved shirt and long pants
- Chemical-resistant gloves, such as Barrier Laminate, Butyl Rubber ≥ 14 mils, Nitrile ≥ 14 mils, or Viton ≥ 14 mils
- Shoes plus socks

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

NOTIFICATION
JAN 2 1997

USER SAFETY RECOMMENDATIONS

Users should:

- Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.

ENVIRONMENTAL HAZARDS

This pesticide is toxic to fish, aquatic invertebrates and aquatic life stages of amphibians. For terrestrial uses, do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwaters.

This product is highly toxic to bees exposed to direct treatment on blooming crops or weeds. Do not apply this product or allow it to drift to blooming crops or weeds if bees are actively visiting the treatment area.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry intervals. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI). Exception: If the product is soil-injected or soil-incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil or water is:

- Coveralls
- Chemical-resistant gloves, such as Barrier Laminate, Butyl Rubber ≥ 14 mils, Nitrile ≥ 14 mils, or Viton ≥ 14 mils
- Shoes plus socks

NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries or greenhouses.

Do not allow contact with treated surfaces until sprays have dried.

CHEMIGATION STATEMENT

Do not apply this product through any type of irrigation system.

EPA Reg. No. 10163-21
EPA Est. No. 67545-AZ-1

GENERAL USE DIRECTIONS

In order that pesticide residues on food and forage crops will not exceed tolerances established by the Federal Food and Drug Administration, use only the recommended rates and intervals, and do not apply closer to harvest than specified.

Consult your State Agriculture Experiment Station or the State Agricultural Extension Service for additional information as the timing of applications needed will vary with local conditions.

Pour specified amount of this product into nearly filled spray tank. Add balance of water to fill tank. Keep agitator running during filling and spraying operations. If mixture does not mix readily, but tends to separate as an oily layer, do not use as injury to plants may result.

Do not combine with wettable powders unless previous use of the mixture has proven physically compatible and safe to plants. Always thoroughly emulsify this product with at least half of total water before adding wettable powders. Rates are given in terms of pints of MALATHION 8 per acre. Unless otherwise specified, apply at the first sign of infestation and repeat at 7-10 day intervals as needed to maintain control, but observe use limitations for specific crop.

PHYTOTOXICITY ADVISORY STATEMENT

As is common with most emulsifiable concentrate formulations adverse effects, such as spotting or discoloration of the fruit or foliage can occur. Some conditions known to contribute to phytotoxicity include, but are not limited to: high temperatures, poor spray drying conditions, excessive spray runoff, certain spray mixtures, stage of crop development or tank mixes with other pesticides.

Application may be made by aircraft or by ground equipment according to the DIRECTIONS FOR DILUTION below. The amount of water needed to treat an acre varies; therefore the following directions are given to cover a broad range of applications.

DIRECTIONS FOR DILUTION

Dilute Application

Field and Row Crops: Use specified rate in 20-60 gals. of water per acre.

Trees and Vines: Use specified rate in 100-800 gals. of water per acre.

Concentrate Application

Field and Row Crops: Use specified rate in not less than 5 gals. of water per acre.

Trees and Vines: Use specified rate in 20-100 gals. of water per acre.

Air Application

Use specified rate in 5-20 gals. of water per acre.

Trees and Vines: Use at least 10 gals. of water per acre.

PREHARVEST INTERVAL

The required days between the last application and harvest are given in () after each crop name.

ORNAMENTAL STATEMENT

Before treating a large number of ornamental plants with Gowan Malathion 8 alone or as a tank mixture with any other material, make a test application on a few plants and observe for 7-10 days prior to treating large areas to reduce the possibility of plant injury.

For Oyster Shell, Fletcher, Juniper, Oak Kermes and Pine Needle Scales, apply when scale crawlers have settled on foliage.
Azalea Scale, Bagworms, Birch Leafminer, Boxwood Leafminer, Fletcher Scale, Florida Red Scale, Juniper Scale, Magnolia Scale, Oak Kermes, Pine Leaf Scale, Tent Caterpillar	1 1/4	CAUTION: Avoid use on certain ferns including Boston, Maidenhair and Pteris, as well as some species of Crassula and Canaetri Juniper
Black Scale Crawlers, Monterey Pine Scale	1 3/5	
Pine Needle Scale, Wax Scale	2 1/2	

MOSQUITO CONTROL

MOSQUITOES, FLIES, AND SMALL FLYING INSECTS: For use by trained personnel as a 2% to 5% Malathion fog, aerosol or space spray. To make a 2% solution dilute 1 part MALATHION 8 in 45 parts water, fuel oil or diesel oil. When using a kerosene-type solvent as carrier, dilute 1 part of Malathion 8 in 45 parts of mixture consisting of 4 parts kerosene-type solvent and 1 part aromatic hydrocarbon-type solvent. Apply 0.58 to 2.86 gallons finished spray per acre. For a 5% solution, dilute 1 part MALATHION 8 in 18 parts of mixture using similar solvents. Apply 0.24 to 1.18 gals. finished spray per acre.

MOSQUITO LARVAE IN STANDING WATER: Apply MALATHION 8 at the rate of 8 fluid ounces (approximately 1/2 lb. actual Malathion) per acre. (Use this dosage only in intermittently flooded areas, stagnant water, temporary rain pools, and log ponds.) Mix in sufficient water or oil to obtain even coverage when applied by air or ground equipment. Repeat applications as necessary. Avoid applying oil-based formulations to valuable ornamental plants as injury may occur. **KEEP OUT OF ANY FISH BEARING WATERS.**

IN AND AROUND BUILDINGS: For use in and around buildings which house domestic animals, around homes, around yards and meat processing plants. Do not use in commercial food preparation areas or in edible products areas of processing plants. Apply spray at rate of 1 gal. per 1000 sq. ft. on painted surfaces and 2 gals. per 1000 sq. ft. on unpainted surfaces where flies alight or congregate. In most cases, adding molasses or sugar to the spray prolongs the insecticidal activity of malathion and serves as a fly attractant.

CAUTION: Avoid contamination of milk, milk equipment and water. Avoid contamination of feed and food products, also drinking fountains and feed troughs. Remove calves under one month of age and lactating dairy animals from buildings before treating.

DROSOPHILA FLY AND DRIED FRUIT BEETLE: On or around cull fruit and vegetable dumps, mix 7 1/2 pints in 100 gals. of water and apply as a drench, using 8-10 gals. of spray per 100 sq. ft. (For best results, dumps should not be over 18 inches deep.) Do not feed treated fruit and vegetables.

STORED GRAIN, FIELD AND GARDEN SEEDS
Except California

For the protection of wheat, oats, rice, corn (field and pop), rye, barley, grain sorghum and sunflower grain and field or garden seeds, against Confused flour beetle. Rice weevil, Granary weevil, Sawtoothed flour beetle, Lesser grain borer and as an aid in control of Indian meal moth, apply 10 ounces of MALATHION 8 in 2-5 gals. of water per 1000 bushels. Apply as the grain is being loaded or turned into final storage. Good coverage is essential. As a supplemental aid in the control of Indian meal moth, apply the material to the surface of clean or uninfested grain at the rate of 5 ounces in 1-2 gals. of water per 1000 square feet of grain surface area. Apply the spray evenly over the surface of the grain. Apply immediately after grain is loaded into storage and repeat if necessary.

STORAGE AND DISPOSAL

DO NOT CONTAMINATE water, food or feed by storage or disposal. **PESTICIDE DISPOSAL:** Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance. **CONTAINER DISPOSAL:** Triple rinse (or equivalent). Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by other procedures approved by State and local authorities.

FOR 24-HOUR EMERGENCY ASSISTANCE (SPILL, LEAK OR FIRE), CALL CHEMTREC® (800) 424-9300.
