1. The first step in the process is to identify the problem. This involves gathering information about the situation and understanding the needs of the stakeholders involved.

2. Once the problem is identified, the next step is to develop a plan. This involves setting goals, identifying resources, and determining the steps that need to be taken to address the problem.

3. The third step is to implement the plan. This involves putting the plan into action and monitoring progress. It is important to stay flexible and adjust the plan as needed.

4. Finally, the fourth step is to evaluate the results. This involves assessing the effectiveness of the plan and determining whether the problem has been solved. If not, the process may need to be repeated.

Replace forklifts (if used) by hand trucks. A hand truck is used to
load animals and unconserved bait properly. Treatments are applied
recurs. Where continuous source of infestation is present establish permanent bait
stations and replenish bait as needed.
