DIRECTIONS

Initially pre-condition your soil under which to plant ECONOCHLOR® or ECONOCHLOR® Biocare® and you'll have a more rapid germination.

RECOMMENDATION: Test each 1500-gal. of your water pool at least once a week. If you have a skimmer basket, allow 8 to 12 hrs. for chlorine to react with the dirt lost from 2 to 4 days depending on water temperature and flow into the system. Chlorine residual should be no greater than one part per million determined by a suitable test kit. If daily testing indicates the chlorine level to be too low, remove the skimmer basket. If daily testing indicates the chlorine level to be very high, then add 1 part to reduce the number of chlorine tablets to 10-12.

For every two weeks a *Monod* type growth curve is plotted to represent the development of the population of *Leptothrix* in *Leptothrix* culture. For this purpose *Reinforced* *SAC-1000R* liquid culture medium is used. The growth of *Leptothrix* will satisfy the following conditions when mixed with *Leptothrix* culture fluid at a ratio of 1:1000 p.p.t. of water being added to 10 ml. culture fluid and being maintained at 37° C.

DANGER A violent explosion will occur when the explosive material is exposed to ignition of electrical equipment or the presence of heat, fire, or sparks. Do not handle explosive material near clothing, tools, electrical equipment, or metal objects.

DANSEK® Co., Inc. - 2000 - 100% Acrylonitrile - 100% Acrylic acid - 100% Chloroform

Keep away from heat, sparks and flame. Avoid breathing dust or fume. Wash hands after handling. Do not drink or eat in contaminated area. Keep away from children.

REVIEW OF THE FISHES OF THE BERING SEA. The following species were taken with cold-water traps, and are described under the heading of "Cold-water Fishes." They are all associated with clothing specimens, or with the gear.

THE ADOPTION OF THE CONSTITUTION OF CANADA, 1867, IS OPEN TO ALL
AND IS NOT RESTRICTED TO CANADIAN CITIZENS.

This general scheme of fact can be extended to any number of variables, and the same method can be applied to take account of all the variables.

THE COST OF MANUFACTURE

TABLETED DURACHLOR
EPA REG. NO. 5100-104

TABLETED DURACHLOR -- Slow dissolving tablets to provide continuous chlorination to control bacteria and algae.

DIRECTIONS

Initially pre-condition your pool water with ECONOCHLOR liquid or POWDERED ECONOCHLOR®. Follow directions on the label of these products.

RECOMMENDED DOSAGE: For each 15,000 qals. of pool water place 1 tablet in the skimmer basket. Allow 8 to 12 hrs. for chlorine residual to equalize. Initial treatment will last from 2 to 4 days depending on water temperature and flow rate through the skimmer. Chlorine residual should be maintained between 1.0 and 1.5 ppm as determined by a suitable test kit. If daily testing indicates the chlorine level to be low, increase the number of tablets in the skimmer basket. If daily testing indicates the chlorine level to be higher than 1.5 ppm, reduce the number of tablets accordingly.

Once every two weeks a shock dose of 5 ppm chlorine should be made to prevent the development of resistant species of algae. TABLETED DURACHLOR is not recommended for this purpose. Regular DURACHLOR used at the rate of $\frac{1}{2}$ lb. per each 10,000 gallons of water will satisfy this requirement when used in conjunction with TABLETED DURACHLOR. Keep pH of water between 7.2 and 7.6 as determined by a suitable test kit.

DANGER: May be fatal or harmful if swallowed. Causes eye damage. May cause irritation of intact skin, nose and throat or burns on broken skin. Do not get in eyes, on skin or on clothing. Dust may be harmful if inhaled. Avoid breathing dust.

DANGER: Strong Oxidant. Moisture contamination may liberate irritating and hazardous chlorine containing gases. Decomposes at 350-475°F with liberation of heat and harmful gases.

Avoid contact with oil, grease, other combustible matter. Store in cool, dry, well-ventilated area. Keep container tightly closed when not in use. Protect from moisture contamination. Keep away from open flames, heaters and other heat sources. Rinse empty container thoroughly with water and discard. Do not burn.

IN CASE OF PERSONAL CONTACT: Remove excess material and flush skin or eyes with cold water for at least 15 minutes. For eyes, get medical attention. Clean contaminated clothing before re-use. If Swallowed: Drink promptly a large quantity of milk, egg whites, gelatin solution or if these are not available drink large quantities of water. Call a physician immediately.

IN CASE OF FIRE OR SUSTAINED DECOMPOSITION: If possible isolate container in open air or well-ventilated area. Flood with large volume of water.

This product is toxic to fish. Do not discharge treated effluent where it will drain into lakes, streams, ponds or public water.

TABLETED DURACHLOR Slow dissolving tablets to provide continuous chlorination to control bacteria and algae.

DIRECTIONS

In fully pre-conditioned pool water with ECONOCHLOR liquid or POWDERED ECONOCHLOR Follow directions on the label of these products.

RECOMMENDED DOSAGE: For each 15,000 quarts of pool water, place 1 tablet in the skimmer basket. Allow 8 to 12 hrs. for chlorine residual to equilibrate. Initial treatment will last from 2 to 4 days depending on water temperature and flow through the skimmer. Chlorine residual should be maintained between 1.0 and 1.5 ppm as determined by a suitable test kit. If daily testing indicates the chlorine level to be low, increase the number of tablets in the skimmer basket. If daily testing indicates the chlorine level to be higher than 1.5 ppm, reduce the number of tablets accordingly.

Once every two weeks a shock dose of 5 ppm chlorine should be made to prevent the development of resistant species of algae. TABLETED DURACHLOR is not recommended for this purpose.
