## DIRECTION FOR USE

5.5

It is a violation of Federal law to use this product in a manner inconsistent with its's labeling.

## DRILLING FLUIDS

DRYOCIDE is a highly effective microbiocide for use in controlling growth of fungi and bacteria found in water based drilling muds. It is especially useful in muds containing starches, Xanthanate guas and wood sugars. The uncontrolled growth of these fungi and bacteria can cause increased corrosion, undesirable odors and degradation of the drilling mud, especially fluid loss properties.

DRYOCIDE is used at the rate of 3 to 15 pounds per 100 bbl. of mud (60 -300 ppm). It can be used directly from the shipping container or predissolved in water. It can be put in through the mud hopper or added to the pump suction.

## FRACTURING FLUIDS

For the control of bacteria in fracturing fluids. add 0.3 to 1.6 pounds DRYOCIDE per 1000 gallons of fracturing fluids (33-160 ppm).
