LAWNS AND TURF

Brown Patch and Dollar Spot: For southern or warm season lawns such as St. Augustine, Bermuda, and similar grasses: Make one application in the fall or spring at first indication of infection. Apply 6 lbs. per 1,000 sq. ft. Following application, the treated areas should be lightly watered to insure movement through the grass to soil level. If the treated area is subjected to unusually heavy rainfall, or flooded, or if the disease is severe or reappears, the area should be retreated 3 to 4 weeks later.

For Dichondra: Treat as above, using 6 lbs. per 1,000 sq. ft. For Northern or cool season lawns such as Ryegrass, Fescue, Bluegrass, Bent, or similar grasses: apply 1.6 to 2.0 lbs. per 1,000 sq ft at first sign of disease. Repeat every 7 to 10 days during warm, damp weather. Water treated area lightly to wash chemical down to soil. Under certain growing conditions, a temporary discoloration of the grass occasionally may occur. This causes no harm and will disappear in a short time.

Helminthosporium Leaf Spot: Apply at rate of 4 to 6 lbs. per 1,000 sq. ft. Preventive applications should be made in Spring or Fall of each year. For control of existing infections, apply at the higher rate as soon as symptoms are first noted. Following applications, the treated area should be lightly watered to insure movement through the grass to soil level. If the treated area is subjected to unusually heavy rainfall or flooded, or if the disease is severe or reappears, the area should be retreated 3 to 4 weeks later.
