and many other broadleaf weeds in lawns and turf.
Where to Use and How to Apply
Use Three-Way Selective Herbicide on lawns, ornamental and recreational turf (not pastures) and golf courses (fairways, aprons, tees and rough) at the rate of 1.2 to 1.5 ounces per 1,000 sq.ft. (3/4 to 4 pints per acre) in sufficient water (1 to 5 gallons per 1,000 sq.ft.) to insure adequate coverage. Apply as a foliar spray when weeds are young and actively growing. It may be necessary to make a second application (spring and fall) to kill certain hard-to-kill weeds such as poison ivy, poison oak, and English daisy. Weeds that start growing in the fall, such as henbit and chickweed, may be controlled more effectively with a fall application. Where advisable, for best spray coverage, LESCO spreader sticker may be added to the spray solution as directed.
This rate, which provides 1.22 pounds of 2,4-D acid equivalent per acre per application per site, is the maximum legal application rate for turf.
The maximum number of broadcast applications per treatment site is 2 per year.
Three-Way is not recommended for closely mowed Bentgrass such as golf and bowling greens.
Chemigation: Do not apply this product through any type of irrigation system.
Less than 5 Gallons: persons engaged in open pouring of this product must also wear coveralls or a chemical-resistant apron.
(Sizes 5 Gallons and Larger): A mechanical system (probe & pump) must be used for transferring the contents of this container. If the contents of a non-refillable pesticide container are emptied, the probe must be rinsed before removal.
