and many other broadleaf weeds in lawns and turf.

USE & APPLICATION

Bentgrass Lawns and Turf - Apoly Lesco Bentgrass Formula at the rate of 3 to 4 pints per acre in sufficient water for uniform coverage, if hardy weeds persist, make a second application after three weeks. Maximum kill of weeds will be obtained from spring or early fall application when weeds are actively growing. Avoid applying during long excessively dry or hot periods unless adequate irrigation is available. If application is made when soil is quite warm, use reduced rates to reduce potential injury. Do not irrigate within 24 hours of application. Do not apply to newly seeded furl until after the second or third mowing. Seed can be safely sown 3 to 4 weks after application at recommended rate. Do not use on dichondra.

If dandellons persist as a special problem, individual spot treatment with a single nozzle hand sprayer is recommended. Do not overdose Bentgress, in closely mowed Bentgress (pulling and bowling greens) apply Lesco Benturess. Formula at a maximum rate of 1 fluid ounce per 1,000 square feet preferably in May, or through September, Any yellowing will disappear after about one week.

For hard-to-kill summer weeds, use 6 pints per acre. Do not apply this rate to bentgrass, centipeds or St. Augustine Orassas.

WARRANTY

Lesco warrants that this herbicide conforms to the chemical description on its label. When used in accordance with label directions under normal conditions, this herbicide is reasonably fit for its Intended purposes. Since timing, method of application, weather, plant, and soil conditions, mixture with other chemicals, and other factors affecting the use of this product are beyond our control, no warranty is given concerning the use of this product contrary to label directions or under conditions which are abnormal or not reasonably forseeable. The user assumes all risks of any such use.
