JAN 8 2007

Ms. Bernadine Javorek LESCO, Inc, 15885 Sprague Road Strongsville, Ohio 44136

Dear Ms. Javorek:

SUBJECT: LESCO Turf Fertilizer with 1.15% Team Amended Label Registration No. 10404-56

The label referred to above, submitted in connection with registration under the Federal Insecticide, Fungicide, and Rodenticide Act, as amended, is acceptable provided that you:

1. Revise the "First Aid" statements on page 1 to comply with PR Notice 2001-1.

The amended label supersede all previously accepted ones. A stamped copy is enclosed for your records. Please submit one copy of your printed label before you release the product for shipment.

Sincerely yours,

Joanne I. Miller Product Manager (23) Herbicide Branch Registration Division (7505C)

Enclosure

M. Ceeke. 1-8-02

CC ۲ Team[™] 1.15% Plus Fertilizer^{2/3}

NOT FOR USE on turf being grown for sale or other commercial use as sod, or for commercial seed production, or for research purposes.

Under the Federal Insecticide, Fundleide, and Rodentielde Act an amended, for the Featurery inder EPA **Bestiolde** HPH: No. 104

Page 1 of 2

For pre-emergence control, apply 174 pounds (2 pounds active ingredient) per acre in the late summer or early fall and again in late winter or spring one to two weeks prior to the expected germination of annual bluegrass.

Southern (warm season) turfgrasses

For pre-emergence control, apply 261 pounds (3 pounds active ingredient) per acre in the late summer or early fail one to two weeks prior to the expected germination of annual bluegrass. In southern areas of the U.S. where germination of annual bluegrass continues for extended penods of time, a second application at 174-261 pounds per acre can be made 10 to 12 weeks after the initial treatment.

For application to smaller areas, apply the following amounts:

SUGGESTED SPREADER SETTINGS* Recommended Rates in Ib per 1,000 sq ft

Spreader	Ground Speed	XX lb	XX lb	XX Ib	XX lb
888	XX mph	XX	XX	XX	XX
bbb	XX mph	XX	XX	XX	XX
COC	XX mph	XX	XX	XX	XX
ddd	XX mph	xx	xx .	XX ·	XX
ff	XX mph	XX	XX	XX	xx
999	XX mph	XX	XX	xx	XX
hhh	XX mph	XX	XX	XX	XX
	XX mph	XX	XX	XX	XX

"IMPORTANT: These settings are only approximate. Age, condition of spreader, and operator speed can cause wide variation. Be sure to calibrate your spreader with each application.

<u>Reseeding</u>: Chemicals that effectively control annual weed seeds may also affect new desirable turigrass seedlings. Reseeding should be delayed for at least 6 weeks after applying. When reseeding, it is essential that proper cultural practices such as soil cultivation, irrigation, and fertilization be followed. For satisfactory reseeding results after using product, the amount of seed used should be increased and equipment designed to place seed in contact with the soil should be employed. When using at the highest recommended rate, eeding should be delayed 12 to 16 weeks after application.

<u>Nication Equipment</u> Apply evenly over the turfgrass area without skips or misses. A more uniform application can be made by spreading half the required amount over the area and then applying the remaining half at right angles. Both drop-type and rotary-type spreaders may be used. Avoid the use of spreaders which would apply the material in narrow, concentrated bands. For best results, use equipment designed to apply granular herbicides and insecticides. Calibrate applicators prior to use according to the manufacturers' directions. Check frequently to be sure equipment is working properly and distributing oranules uniformity.

Helpful Application Techniques for Applying:

Net Weight: XX lb (XX kg) EPA REG. NO. 10404-56 EPA EST. NO. 10404-FL-1(S), 10404-OH-4 (M), 59197-CA-1 (C) Figt jetter of lot code indicates manufacturing site. FXXXX Manufactured by: LESCO, Inc. 15885 Sprague Road Strongsville, Ohio 44136-1799

 When using a drop-type spreader, a splash board mounted under the hopper will help dispense granules more evenly. A chain fastened to the side of your spreader will leave a marked or scuffed turf area to follow and help prevent missed areas.

- 2. When using tractor-mounted or pull-type rotary applicators, it is suggested that a seed application nng and a time shield be used to control distribution of granules. Early morning applications, when the wind is calm and dew is on the ground, are ideal. Wheel tracks are easy to follow and granules can be spread uniformly.
- Small area application is easy using a small rotary applicator. To ensure proper coverage and avoid missed areas, early morning treatment, when wheel tracks are evident in the dew and the wind is calm, is ideal.

<u>Precautions</u>: Apply to the turf prior to the germination of weed grasses since it will not control established weeds. It may thin established annual bluegrass (*Poa annua*) turfs and fine-leaved (escues at rate above 131 pounds per acre (1.5 pounds active ingredient). This should not be applied in the spring to turfgrass planted the previous fail. In bermudagrass areas that have been overseeded with winter grasses, a spring application may thin the over-seeded grasses. Because of varying cultural practices, do not use on Bermudagrass, St. Augustinegrass, or Centipedegrass until these turfs are well established.

WARRANTY

LESCO warrants that this herbicide conforms to the chemical description on its label. When used in accordance with label directions under normal conditions, this herbicide is reasonably fit for its intended purposes. Since timing, method of application, weather, plant and soil conditions, mixture with other chemicals, and other factors affecting the use of this product are beyond our control, no warranty is given concerning the use of this product contrary to label directions or under conditions which are abnormal or not reasonably foreseeable.
