SUBJECT:

LESCO Fertilizer with 0.20% Barricade Preemergence Herbicide

EPA Registration No.: 10404-88

Dear Ms. Miller:

The above referenced label has been revised to more accurately reflect the initial rate for this A.I. percentage.

- ◆ 8570-1: Notification request form for EPA Registration No. 10404-88
- One (1) highlighted label noting:
 - ♦ Maximum Annual Rates:

Revised Creeping Red Fescue rate to 375 lb/acre (8.60 lb/1,000 sq ft). Revised statement 3 to read "Use at an initial rate of 190 to 375 lb/acre per application followed by sequential applications at doses that would not exceed the maximum annual application rate of 750 lb/acre/year."

Spreader Settings:

Deletion of 11.48 lb & 17.22 lb as recommended rates Addition of lower recommended rates of 4.40 lb & 5.70 lb Revised 8.49 lb to 8.60 lb as the highest recommended rate

• Five (5) copies of the clean label

If you have any questions, please contact me at 440-783-9250, ext. 2207 or email at sspencer@lesco.com. Thank you for your assistance on this matter.

Sincerely,

Susan E. Spencer

Supervisor, Regulatory Affairs

Enclosures

rcw

If swallowed	Call a poison control center or doctor immediately for treatment advice.					
	Have person sip a glass of water if able to swallow.					
	Do not induce vomiting unless told to by the poison control center or doctor.					
	Do not give anything by mouth to an unconscious person.					
If in eyes	Hold eye open and rinse slowly and gently with water for 15-20 minutes.					
	Remove contact lenses, if present, after the first 5 minutes,					
	then continue rinsing.					
	Call a poison control center or doctor for treatment advice.					
If on skin or	Take off contaminated clothing.					
clothing	Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for treatment advice.					
If inhaled	Move person to fresh air.					
	If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth if possible.					
Call a poison control center or doctor for further treatment advice.						
HOT LINE NUMBER						

Have the product container or label with you when calling a poison control center or doctor or going for treatment. You may also contact Chem-Trec at 1-800-424-9300 for emergency medical treatment information.

PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION: Causes moderate eye injury (irritation). Harmful if inhaled or absorbed through the skin. Avoid contact with skin, eyes, or clothing. Avoid breathing dust. Wash thoroughly with soap and water after handling. Prolonged or frequently repeated skin contact while handling the material may cause allergic reactions in some individuals.

ENVIRONMENTAL HAZARDS

This product has low solubility in water. At the limits of solubility, this product is not toxic to fish. However, at concentrations above the level of water solubility, it may be toxic to fish. Do not apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. Drift and runoff from treated areas may be hazardous to aquatic organisms in adjacent sites. Do not contaminate water when disposing of equipment washwaters.

STORAGE AND DISPOSAL

STORAGE: Store this product only in its original container in a dry, cool, secured storage area. Do not contaminate water, foodstuffs, feed or seed by storage or disposal.

PRODUCT DISPOSAL: Wastes resulting from the use of this product that cannot be used or chemically reprocessed should be disposed of in a landfill approved for pesticide disposal or in accordance with applicable Federal, State or local procedures. Or call [1-800-CLEANUP] for disposal instructions. Never place unused product down any indoor or outdoor drain.

EMPTY CONTAINER DISPOSAL: Do not reuse bag. Dispose of emptied bag(s) in a sanitary landfill approved for pesticide disposal, or by incineration.

SPILL: In case of spill, sweep up material and dispose of material according to "product disposal" directions listed above.

DIRECTIONS FOR USE

- It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.
- This product is a selective pre-emergence herbicide that provides residual control of many grass and broadleaf weeds in established turf grasses (excluding golf course putting greens) and lawns; landscape ornamentals; and established perennials & wildflower plantings. This product controls susceptible weeds by inhibiting weed seed germination and root development. Most effective weed control will be obtained when this product is activated by at least 0.5 inch of rainfall or irrigation prior to weed seed germination and within 14 days following application.
- Not for use on plants being grown (1) for sale or other commercial use, (2) for commercial seed production, or (3) for research purposes. For use on plants intended for aesthetic purposes or climatic modification and being grown in ornamental gardens or parks, or on golf courses or lawns and grounds.
- Do not graze or feed livestock forage cut from areas treated with this product.
- Do not apply this product through any type of irrigation system.
- Do not apply aerially.
- Do not apply to golf course putting greens.

USE PRECAUTIONS

The following use precautions apply to the use of this product in turf grasses and lawns:

- Application of this product may thin emerged annual bluegrass and newly over-seeded grasses.
- Do not apply to overseeded turf for 60 days after seeding or until after the second mowing, which ever is longer. Injury to desirable seedlings is likely if this product is applied before seedling secondary roots are in the second inch of soil, not thatch plus soil.
- Do not cut treated sod before 120 days after application. Do not apply to newly set sod until the following year.
- Application of this product to turf stressed by drought, low fertility, or pest damage may result in turf injury.
- Disturbing the herbicide barrier with cultural practices such as disking may result in reduced weed control.
- Do not apply this product to putting greens or areas where dichondra, colonial bentgrass, velvet bentgrass or annual bluegrass (Poa annua) are desirable species.

APPLICATION DIRECTIONS

Apply uniformly through suitable, calibrated commercial application equipment.

ESTABLISHED TURF

This product is a selective pre-emergence herbicide that, when properly applied, will control certain grass and broadleaf weeds in established turf grass and lawns. The maximum amount of this product that may be applied per year is given for each turf grass species in the Maximum Annual Rates section of this label.

Most effective weed control in turf grasses will be obtained when this product is activated by at least 0.5 inch of rainfall or irrigation prior to weed seed germination and within 14 days following application. See the information below for approximate crabgrass seed germination dates.

Region Upper North North Transition South

Date
After May 10
After April 20
After March 20
Jan 1 - March 20

RATES OF APPLICATION

This product may be applied as a single application or in sequential applications to control weeds germinating throughout the year. All applications must be made prior to germination of the target weeds. This product will not control established weeds. Maximum use rate selection should be based on turf species. The length of time of residual weed control provided by this product is related to the rate applied.

MAXIMUM ANNUAL RATES

This product is recommended for use on the turf grass species listed below. Do not exceed the maximum yearly rate:

Maximum Application Rate per Calendar Year ¹						
Turf Species	lb LESCO Stonewall 0.20% Plus Fertilizer / acre	lb Al per Acre				
Bermudagrass ² Bahiagrass Centipedegrass Seashore Paspalum St. Augustinegrass ³ Tall Fescue (including turf-type) Zoysia	750 lb/acre (17.22 lb/1,000 sq ft)	1.5				
Buffalograss Kentucky Bluegrass Perennial Ryegrass	500 lb/acre (11.48 lb/1,000 sq ft)	1.0				
Creeping Red Fescue	375 lb/acre (8.60 lb/1,000 sq ft)	0.75				
Creeping Bentgrass	330 lb/acre (7.57 lb/1,000 sq ft)	0.65				

- 1. These are the maximum rates per calendar year by species limitations.
- 2. May be used on newly sprigged or plugged Bermudagrass at rates not to exceed 260 lb/Acre. Newly sprigged or plugged Bermudagrass stolon rooting may be temporarily retarded. Suppression only of Foxtail, Goosegrass, and Rescuegrass due to reduced product rates used in sprigging situations.
- Use at an initial rate of 190 to 375 lb/acre per application followed by sequential
 applications at doses that would not exceed the maximum annual application rate of
 750 lb/acre/year.

Do not apply more than 750 lb of this product per acre per calendar year.

Use the higher rates of this product to achieve higher levels of fertility and weed control for each turf type.

SUGGESTED SPREADER SETTINGS*

	Recommended Rates in lb per 1,000 sq ft						
Spreader	4.40 lb	5.70 lb	7.57 lb	8.60 lb			
LESCO Calibration Gauge	#XX	#XX	#XX	#XX			
SCOTTS® R8A	XX	XX	XX	XX			
Cyclone® or Spyker®	XX	XX	XX	XX			
LESCO Pendulum	XX	XX	XX	XX			

*IMPORTANT: These settings are only approximate. Age, condition of the spreader, and operator speed can cause wide variation. Be sure to calibrate your spreader with each application.

Stonewall[™] 0.20% Plus Fertilizer

APPLICATION TIMING AND INFORMATION

This product may be applied to newly transplanted and established ornamentals as a broadcast, over the top, or directed application. Irrigation or rainfall soon after application will wash residues off plant foliage and activate this product in the soil. This product may be applied at any time to established plants. Delay application to allow soil to settle around new transplants and water thoroughly application to allow soil to settle around new transplants and water thoroughly before applying this product. Apply this product after cuttings form roots and become established. Apply before budding/grafting or after buds/grafts have taken to avoid any inhibition of the tissue union. This product is a pre-emergence herbicide and will not control emerged weeds. Most effective weed control in ornamentals will be obtained when this product is activated by at least 0.5 inch of rainfall or irrigation, or with shallow (1 to 2 inch) mechanical incorporation, prior to weed seed germination and within 14 days following application. Best weed control is obtained when this product is applied to soil free of clods, weeds, and debris such as leaves. Prior to application of this product, control existing vegetation by hand-weeding, cultivation, or the use of an appropriate postemergence herbicide

TOLERANT ORNAMENTAL SPECIES

This product will not harm most established ornamental trees, shrubs, flowers. The species listed below are tolerant to this product. Best results will be obtained when this product is uniformly applied to the soil surface; avoid applying to ornamental shoots which may defeat the effort to get uniform distribution on the soil surface. This product may be applied over the top of these species without

WEEDS CONTROLLED

When used in accordance with this label, this product will provide control of the following weeds:

Barnyardgrass	Goosegrass	Lovegrass	Speedwell
Bluegrass, Annual (<i>Poa annua</i>)	Henbit	Panicum (Texas, Fall, Brown Top)	Sprangletop
Carpetweed	Itchgrass	Pigweed	Spurge, Prostrate
Chickweed, Common, Mouseear	Johnsongrass (from seed)	Purslane, Common	Witchgrass
Crabgrass (large, smooth)	Junglerice	Pusley, Florida	Woodsorrel, Yellow (from seed)
Crowfoot grass	Knotweed	Rescuegrass ²	
Cupgrass, Woolly	Kochia	Shepherd's Purse ³	
Foxtails, Annual	Lambsquarter,	Signalgrass, Broadleaf]

- 1. In many areas a single application of 330 to 750 lb/acre of this product will control the above listed weeds and gooesgrass. However, under heavy goosegrass pressure and/or an extended growing season, most effective weed control can be obtained by making an initial application of 330 to 500 lb/acre followed after 60 to 90 days by a second application at doses that would not exceed those given in the Maximum Annual Rate Table. Do not exceed the maximum rate for turf grass species listed in the Maximum Annual Rate Table
- Suppression only. Sequential applications may be made so long as the total amount of product applied does not exceed the maximum annual application rates recommended for each turf species. All applications must be made prior to germination of weed seeds.
- 3. Applications for this weed should be made in late summer, fall or winter prior to germination.

WHEN TO APPLY AFTER OVERSEEDING

Do not apply to overseeded turf within 60 days after seeding or until after the second mowing, whichever is longer. Injury to desirable seedlings is likely if this product is applied before seedling secondary roots are in the second inch of soil, not thatch plus soil.

WHEN TO OVERSEED AFTER APPLICATION

This product will inhibit the germination of turf species if overseeded too soon after application. Follow rates and intervals in the table below for best overseeding/reseeding results.

LESCO Stonewall 0.20%		Interval Before Overseeding				
Plus Fertilize	r Rate (lb/Acre)					
Product	Al	North	Transition	South		
250 lb/acre	0.50 lb/acre	4 months	4 months	4 months		
330 lb/acre	0.66 lb/acre	5 months	4 months	4 months		
370 lb/acre	0.74 lb/acre	6 months	5 months	5 months		
400 lb/acre	0.80 lb/acre	-	6 months	6 months		
500 lb/acre	1.00 lb/acre	-	7 months	7 months		
570 lb/acre	1.14 lb/acre	-	-	9 months		
650 lb/acre	1.30 lb/acre		-	10 months		

LANDSCAPE ORNAMENTALS

(Including Established Perennial and Wildflower Plantings)

This product may be applied for residual pre-emergence weed control in ornamentals.

<u>Use Rates</u> — Apply this product at 330 to 750 lb/acre in fall and/or spring. Use the higher rates of application for longer control periods. Sequential or single applications are allowed so long as the total amount of product applied does not exceed the maximum annual application rate of 750 pounds, per acre, per year.
