It is a violation of Federal law to use this product in a manner inconsistent with its label.

This product is intended for exterior use and above ground use.

This product is for use only by certified applicators or by persons under their supervision and only for those uses covered by the certified applicators' certification.

COMMERCIAL TREATMENT

This product is a concentrate and must be diluted before use. Add one part of Dura-Treet 40 to nine parts of fuel oil, kerosene, or other hydrocarbon with the desired volatility, and mix well. Treat wood members as otherwise described below. Pressure treatment in a commercial pressure facility allows for the attainment of proper retention and penetration levels and makes the treated wood products suitable for ground contact.

To protect dry and/or seasoned lumber, timbers, posts, poles and other wooden members before construction or before placing in contact with the soil. The wood should be treated in a commercial vessel capable of physically (by pressure, temperature or time) impregnating the wood and providing adequate penetration and retention. If temperature or time is used as the treating parameter, treat for 12 to 48 hours or until effective retention and penetration is achieved.
