

**PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS**

DANGER! CAUSES EYE DAMAGE
AND SKIN IRRITATION
HARMFUL IF SWALLOWED

- Do not get in eyes, on skin, or on clothing.
- Wear goggles or face shield and rubber gloves when handling.
- Remove contaminated clothing and wash before reuse.
- Wash thoroughly with soap and water after handling.
- Avoid contamination of food.

FIRST AID

Eyes — In case of eye contact, flush with plenty of water for at least 15 minutes. Get medical attention immediately.

Skin — In case of skin contact, wash with plenty of soap and water. If irritation persists, get medical attention.

Internal — If swallowed, call a physician or Poison Control Center. Drink 1 or 2 glasses of water and induce vomiting by touching back of throat with finger or, if available, by administering syrup of ipecac. Do not induce vomiting or give anything by mouth to an unconscious person.

ENVIRONMENTAL HAZARDS

This pesticide is toxic to fish. Do not discharge into lakes, streams, ponds, or public waters unless in accordance with an NPDES permit. For guidance, contact your Regional Office of the EPA.

STORAGE AND DISPOSAL

Keep container closed when not in use. Do not contaminate water, food, or feed by storage or disposal. Reseal empty container and offer for reconditioning or bury in a landfill approved for pesticide disposal.

For information regarding human or environmental exposure, call (412) 777-8000 and ask for Regulatory and Trade Affairs.

DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

METHOD OF FEEDING

Badly fouled systems should be cleaned before initiating treatment. Add H-700 to the system as received. Do not dilute or mix with other treatment chemicals.

Add H-700 to the sump suction side of the recirculating pump or any other point of turbulent flow. Addition may be slug, intermittent or continuous depending on the severity of contamination and system retention time. Optimum performance will be attained by continuous feed.

DOSAGE RATES

Recommended dosages should allow for normal water loss through evaporation, blowdown and drift and afford adequate contact time with the organisms. Your Calgon representative will provide technical assistance in relation to specific plant conditions or problems.

DOSAGE

Test data indicate that 2.2-5 ppm H-700 based on total water flow at maximum dilution will inhibit the growth of slime-forming organisms usually encountered in industrial recirculating water systems. Each system varies considerably as to the temperatures, conditions of the system, etc. therefore the amount of H-700 needed to control slime formation is best determined by actual test in a particular system. The addition rate should be such so as to give an initial concentration of 2 ppm based on total water flow. This should be adjusted based on observed conditions of the system up to maximum concentrations of 2.5 ppm. A suggested dosage range would be 0.24-0.30 fl. oz. / 1000 gal. water.
