EPA Est. No. 10445-MO-1

Net Contents: 1 U.S. Gal. 7 Fl. Oz. (4 Liters)

CALGON CORPORATION ST. LOUIS, MO 63166

DIRECTIONS FOR USE

GENERAL CLASSIFICATION:

It is a violation of Pederal law to use this product in a manner inconsistent with its labeling.

NO. 85 Algaecide is used to control algae, bacteria, and fungi in recirculating commercial and industrial water cooling towers. Prior to its use, systems must be cleaned to remove algae growth, microbiological alime, and other deposits. An initial slug addition of 1.90 to 4.75 fluid ounces of NO. 85 Algaecide per 1,000 gallons of water to provide a concentration of 16 to 40 ppm, based on the total weight of water in the system, is recommended. Repeat initial dosage until control is evident.

Submequent additions may be continuously fed via Calgon's Nos. 215 or 1075 Drip Feeders or it may be slug fed. Then drip feeding, use one gallon for six months (1/6 gal./mo.) for each 1 gpm head. This will provide 4 to 5 ppm of No. 85 Aigaecide on a continuous basis. If slug feeding, additions of 0.47 to 4.75 ounces per 1,000 gallons of water (4 to 40 ppm) should be employed every 2-5 days, or as needed. The frequency of addition depends upon the relative amount of bleed-off and the severity of the microbiological problem. Slug additions should be made into the sumps of cooling water towers.
