

This algicide is formulated to complement swimming pool water being treated with normal chlorine systems. It is especially effective against growth of algae and being non-volatile aids in maintaining pool water clarity and sparkle. The residual effectiveness of this algicide tends to stabilize the total chemical treatment system.

This algicide is compatible with all chemicals normally used in swimming pool maintenance; however, in its concentrated form this chemical should not come into contact with high concentrations of chlorine. **DO NOT MIX THIS ALGICIDE AND CHLORINE TOGETHER** when adding to the pool. These chemicals should be handled separately.

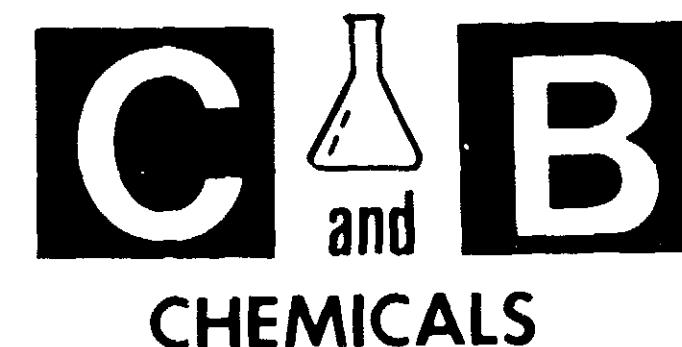

This algicide is economical, efficient, stable.

DIRECTIONS

For an initial application use one gallon of this algicide per 25,000 gallons of water. Use one quart per 50,000 gallons of water every fifth to seventh day depending on weather and use factors.

The initial dose is used when filling pool at beginning of swimming season and to clean pool free of visible algae. If pool has visible algae, treat with initial dose. Vacuum pool after 24 hours to remove algae debris. If visible algae are still present or reappear, repeat this treatment procedure as necessary. When pool is free of algae use recommended maintenance doses.

After each use of consequent add one quart per 50,000 gallons water. Even though the pool may not be in use for periods of time, algae growth should be controlled since a heavy accumulation of algae growth is difficult to remove. The appropriate amount of the algicide should be added by pouring directly into the pool. More rapid distribution will be achieved by pouring half of the specified amount into several areas of the pool. Re-distribution is extremely difficult with more rapid dispersion.

NET CONTENTS _____

F.P.A. Reg. No. 104714

DANGER. Keep Out of Reach of Children. Corrosive. Causes eye damage and skin irritation. Do not get in eyes, on skin or on clothing. Wear goggles or face shield and rubber gloves when handling. Harmful or fatal if swallowed. Avoid contamination of food.

FIRST AID: In case of contact immediately flush eyes or skin with plenty of water for at least 15 minutes. For eyes call a physician. Remove and wash contaminated clothing before reuse.

If swallowed drink promptly a large quantity of milk, 3-4 whites gelatin solution or if these are not available drink large quantities of water. Avoid alcohol. Call a physician immediately.

NOTE TO PHYSICIAN Prepare triple sulfur emulsion or tranducate this use of sulfur vapors. Moderate aspirant inhalation, chronic respiratory depression and circulatory arrest may be needed.

Rinse empty container of the roughy with water and discard it. The product is very fish. Treated effluent should not be discharged where it will drain into lakes, streams, ponds or public water.

Avoid the product to avoid repeated contact.

TO DETERMINE POOL CAPACITY

Rectangular Pools Length times width times average depth in feet times 7 = equal volume.

Round and Oval Pools Average radius times the circumference in feet times average depth in feet times 7 = equal volume.
