- Mustard
- Pennywort
- Pepperweed
- Pigweed
- Plantain
- Prickly Lettuce
- Purslane
- Sheep Sorrel
- Shepherd's Purse
- Yarrow

TRY KILZALL.

U.S.D.A. Reg.
No. 10526-1
Patent Pending

DIRECTIONS

"KILZALL" IS A GENERAL HERBICIDE WHICH WHEN PROPERLY USED WILL STOP HAND WEEDING CHORES IN FLOWER BEDS, BORDERS AND LAWNS. Simply direct a stream of "Kilzall" at the plant or weed you wish to kill by gently squeezing the side of the container in an inverted position. For best results, apply "Kilzall" on a warm day in full sunlight. Within 24 hours it evaporates with no residual effects on new or existing plantings. *

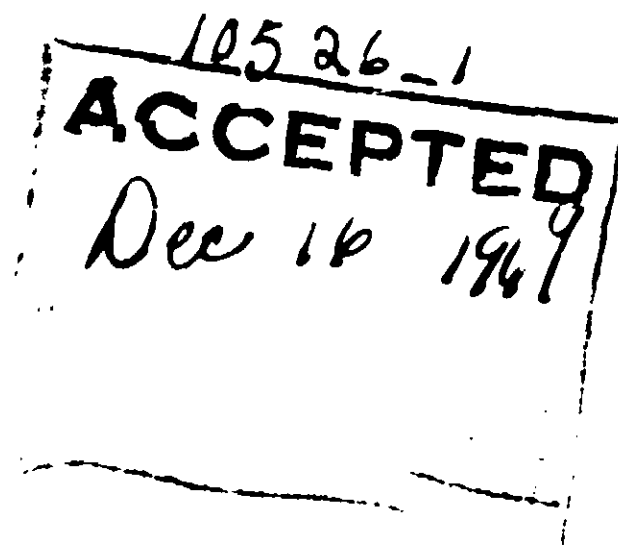

For Flower Gardens: Direct a stream of "Kilzall" at the crown or main stem of the weed, covering at least 75% of the plant leaf area. "Kilzall" is a general herbicide and care must be taken so as not to inadvertently direct the stream at desirable plants.

Borders: Encroaching grass or other undesirable plants can be stopped by merely tracing with a stream of "Kilzall" the desired border you wish to maintain.

Lawns: "Kilzall" is extremely effective for spot treatment of such lawn pests as dandelions or crab grass. Direct a stream of "Kilzall" at the undesirable plant being sure the crown of the plant has been thoroughly treated. In order to assure that the "Kilzall" is not accidentally sprayed over desirable areas of the lawn, these applications should be made with the nozzle 2" or 3" away. The weed will die within 24 hrs. (ON a warm, sunny day, noticeable effect is evident in only 4 hrs.) "Kilzall" will then evaporate and the healthy grass plants surrounding the dead weeds will fill in the space.

NOTE: *Many weeds such as dandelion and plantain can be killed with one application. However, certain types, such as thistle or golden rod may only be top killed and a second application may be necessary. For optimum effectiveness, apply when weeds are young and actively growing.
