How to use the GIANT DESTROYER

1 Find main runway and clear one opening for easy cartridge insertion. Make sure all other openings are sealed.

2 Insert fuse firmly into cartridge and making sure to leave two inches of fuse exposed

3 Light fuse and insert cartridge into runway opening. Minimum fuse burning time 5 seconds

4 When cartridge begins to smoke, cover opening completely with dirt

FOLLOW THESE INSTRUCTIONS:

Use only inside of burrows, never inside of building.
MOLES (lawns, golf courses, non-crop areas) -- To locate the main runway, look for fresh conical mounds of dirt. Select the freshest of these, remove plug and dig in direction of main runway. If lateral to the mound is plugged, either dig past the plug or probe ground around the plug to locate it in runway. Main runway will be found when probe meets little or no resistance. When runway is found, prepare an opening into runway large enough so that cartridge can be inserted easily. Collect sufficient dirt and other material for closing hole. Light fuse and insert cartridge into hole, fuse-end first. Cover cartridge quickly, but take care not to smother it with dirt. Quickly close any holes where gas escapes. If your excavations have divided main runway into sections, treat each portion.

POCKET GOPHERS (meadows, reforested areas) -- Locate the star-shaped mounds with signs of recent gopher activity. Find the horseshoe-shaped depression on one side of the mound. To locate the main runway, probe ground 15-18 inches from mound on the same side as the depression. The main runway has been located when ground further on the probe has been released. Dig down to main runway, taking care not to block it off with dirt. Create an opening large enough for easy insertion of the cartridge. Collect enough dirt and other material to close opening. Light fuse and insert fuse end first. Immediately cover opening, taking care not to smother cartridge with loose dirt. Cover any other holes where gases escape. Treat all active mounds.

WOODCHUCKS (open fields, non-crop areas) -- Locate all burrow entrances. Select one for use and close all other entrances with loose dirt. Light fuse and insert cartridge, fuse end first. Cover with loose dirt, being careful not to smother the cartridge with dirt. Close all

state game laws before using this product for woodchuck control.

NORWAY RAT (non-crop areas) -- Use only where burrows are isolated from homes, barns, and all other man-made structures. DO NOT USE inside buildings or anywhere where gases could enter buildings. Collect plenty of dirt and other materials for closing burrow openings. Treat each burrow opening by lighting fuse and inserting cartridge, fuse end first into hole. (Make sure hole is large enough for easy insertion before lighting fuse.) Cover hole immediately, taking care not to smother cartridge with loose dirt. Immediately cover all other openings from which gas escapes. Proceed to next closest burrow and treat as above.

GROUND SQUIRRELS (rangeland) -- Collect plenty of dirt and other material for closing burrow openings. Treat each burrow opening by lighting fuse and inserting cartridge, fuse end first into hole. (Make sure hole is large enough for easy insertion before lighting fuse.) Cover hole immediately, taking care not to smother cartridge with loose dirt. Immediately cover all other openings from which gas escapes. Proceed to the next closest burrow and treat as above.

SKUNKS (non-crop areas) -- Do not use outdoors. Do not treat dens under isolated structures or buildings where toxic gases could enter man-made structures or domestic animals. Do not use in burrows under sheds. Do not use in burrows under buildings where the cartridge hole is large enough to permit a skunk to enter the building. Do not use in burrows where the hole to be made is large enough to permit a skunk to enter the building. Do not use in burrows where the purpose is to kill a skunk. Light fuse and insert fuse end first into opening, being careful not to smother cartridge with loose dirt. Cover with loose dirt, being careful not to smother the cartridge with dirt. Close all

KANSAS Need wildlife permit (see insert)

For larger animals or longer runways, use more than one cartridge

PRECAUTIONARY STATEMENTS

Hazards to humans and domestic animals

WARNING

After ignition, cartridge produces oxide of sulfur gases. Fumes may be harmful if inhaled.

STATEMENT OF PRACTICAL TREATMENT

If inhaled and person has poisoning symptoms (headache, nausea, dizziness, and weakness) transfer victim to fresh air. Have victim lie down and keep warm. If respiration is adequate recovery will be rapid. If breathing has stopped, use artificial respiration. If available, pure oxygen should be used. Call a physician immediately.

ENVIRONMENTAL HAZARDS

This product is highly toxic to wildlife. Check all burrows for signs of nontargets. If present, do not treat burrows. See enclosed Endangered Species Considerations insert.

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.
Storage: Store in cool, dry place away from fire, heat and direct sunlight.
Pesticide Disposal: To dispose of unused cartridges, soak in water, crush and bury at least 6" in loose soil.
Container Disposal: Place in trash collection.

CHEMICAL HAZARDS

Once ignited by the fuse, this cartridge will burn vigorously until completely spent and is capable of causing severe burns in exposed skin and clothes, and of igniting dry grass, leaves and other combustible materials.
