GRAIN PROTECTANT EMULSIFIABLE CONCENTRATE

DIRECTIONS

At a convenient time before the grain is to be stored, thoroughly sweep and clean the bin or other storage places of grain, being careful to remove all lots of waste grain from inside and around the bin. Then apply Pyrenone Grain Protectant - Emulsifiable Concentrate, diluted and agitated with 59 parts of water, and thoroughly wet the walls, ceilings, partition boards, etc.. One gallon of the dilute spray covers about 750 square feet of surface.

When the grain is ready for storage, dilute Pyrenone Grain Protectant - Emulsifiable Concentrate at the rate of 1 part of the concentrate with 29 parts of water. Agitate or mix well.

Application, at the rate of 5 gallons of diluted Pyrenone Grain Protectant - Emulsifiable Concentrate for every 1000 bushels of grain, should be made to the stream of grain going into storage. The diluted spray is applied at an even rate onto the grain at such a point that the grain will be tumbled and mixed before it enters the storage bin. For large installations, such as terminal and mill elevators, application should be made on the conveyor belt just ahead of the trough. For country and line elevators it should be made as the grain enters the auger conveyor, at any point of point from to the grain entrance to the bin. Under normal conditions the spray should be applied to the top of the grain, taken care to spray the sides of a bin may be sprayed if there is a possibility of infestation.

Monthly inspections of the grain should be conducted or treated with Pyrenone Grain Protectant. If the top 2 or 3 inches of grain are found to be infested, spray the surface evenly with diluted Pyrenone Grain Protectant - Emulsifiable Concentrate. For this application dilute 1 part of the concentrate with 19 parts of water and apply the diluted spray at the rate of 1 to 2 gallons per 1000 square feet of grain surface.

Pyrenone Grain Protectant

For the preparation of Pyrenone Grain Protectant spray to be used on Corn, Barley, Buckwheat, Wheat, Oats, Rye, Rice, Popcorn and Grain Sorghum held in storage.

Diluted with water according to directions to control the exposed stages of rice weevil, granary weevil, confused flour beetle, lesser grain borer, and other grain beetle and fat grain beetle.

When properly applied, the Pyrenone Grain Protectant spray should be effective against the stored grain insect pests.

When used as a preventive measure, the Pyrenone Grain Protectant spray should be applied to the grain at the time of storage.

REGISTERED TRADEMARK

REGISTERED TRADEMARK

Pyrethrin	0.0%
Piperonyl Butoxide (EPA Reg. No. 100-10880)	60.0%
Petroleum Distillate	6.0%
INERT INGREDIENTS	28.0%

Equivalent to 43.0% of the active ingredient, permethrin, as a 100% active ingredient.
