UNDER THE FEDERAL INSECTICIDE ACT
FOR USE AS A HOUSEHOLD INSECTICIDE
REGISTERED UNDER NO. 10595-2

DIRECTIONS

ROACHES, WATER BUGS, ANTS, AND SILVERFISH:

Spray so as to wet all cracks, crevices, and under tables, behind sinks, drainboards and cabinets; or wherever these insects may be seen or known to be. This will drive out and kill insects contacted. Repeat as necessary.

FLIES AND MOSQUITOES: For use as a space spray, close all windows and doors. Spray upwards to produce a thick mist. After about 10 minutes the dead insects may be swept up and windows and doors opened. Repeat as necessary.

CLOTHES MOTHS: Closets, chests, drawers, etc., should be thoroughly sprayed before clothing is placed in them. Garments should be carefully sprayed, both inside and out, paying particular attention to the folds and seams. In spraying delicate fabrics the sprayer nozzle should be held at least 2 feet from the material being treated. Rugs should be sprayed sufficiently on both sides so as to wet the surface. Articles not stored in tight containers should be retreated at monthly intervals.

CARPET BEETLES AND BUFFALO BEETLES: In rooms infested with these insects, in addition to the procedure used for clothes moths, particular attention must be paid to direct the spray into all cracks in the flooring and behind baseboards. Repeat as necessary.

BEDBUGS: Carefully treat all bedsteads and mattresses paying special attention to all hiding places. Spray the baseboards and all cracks and crevices in the room. Repeat as necessary.
