

GENERAL DIRECTIONS:

Place bait in locations where rats and mice feed, water or travel.

Bait placements along walls, in corners, and in concealed locations where rats and mice can feed unobserved are desirable.

Bait should be placed in locations not accessible to children, pets and domestic animals or in tamper-proof bait boxes.

DIRECTIONS

FOR RATS

- Use 1 1/2 lb. or more per bait station. For effective control an uninterrupted supply of bait should be maintained for a minimum of 10 days and continued longer if feeding is observed.

FOR MICE

- Use 4 oz. per bait station and use more frequent bait placements (one every 8 to 10 feet). For effective control an uninterrupted supply of bait should be maintained for at least 15 days and continued longer if feeding is observed.

IMPORTANT

- Baiting should be continued until all signs of feeding has stopped.

Baits that become moldy, spoiled or contaminated in any way should be replaced promptly.

Where a continuous source of infestation is present, permanent bait stations should be established and replenished as needed.
