

CLEARWATER TABLETS

*CLEARWATER is intended to treat weeds
in recreational lakes and ponds.*

CAUTION

**KEEP OUT OF THE REACH OF CHILDREN, AVOID CONTACT WITH SKIN, EYES
OR CLOTHING, WEAR RUBBER GLOVES WHEN SPREADING PELLETS.**

(See Additional Cautions Below)

HOW TO USE CLEARWATER

The CLEARWATER tablets are hard and dissolve slowly in water. The proper way to spread the pellets is to broadcast them with a fanning motion of the hand over the surface of the water, similar to the way grass seeds are sown.

Start 25 pellets per 1,000 square feet of surface in average weed density. Applications of 100 pellets per 1,000 square feet of surface may be needed in areas of high weed density.

Use the same amount per acre sowing once for early spring control.

CLEARWATER is intended to control the following common lake weeds: arrowhead, bladderwort, hornwort, spatterdock, crow lily, water lily, water weed, Elodea or Anacharis, waterchestnut, water hyacinth, water smartweed, water hickory, and water lettuce.

Treatment of aquatic weeds can result in oxygen loss from decomposition of dead weeds. This loss can cause fish suffocation. Therefore, to minimize this hazard, treat 1/3 to 1/2 of the water area in a single operation and wait at least 10 to 14 days between treatments. Begin treatment along the shore and proceed outward to permit fish to move into untreated areas.

Do not allow fish to be fed at application rates recommended on the label. Do not use this product in any way to be applied to public water. If there is any question about the use of CLEARWATER, consult a local health or environmental specialist.

Keep CLEARWATER pellets from contaminating nearby streams, rivers, lakes, or other water bodies. Do not use CLEARWATER pellets near a fertilizer source, insecticide, or fungicide. Do not use CLEARWATER pellets near a water supply. Do not use CLEARWATER pellets near a water supply.
