DIRECTIONS

FORMULA 8-13 is a cleaner, disinfectant, and sanitizer designed for general household and light industrial cleaning. For use on walls, floors and any inanimate hard surfaces. When used as directed, FORMULA 8-13 will also deodorize those areas which generally are hard to keep fresh smelling, such as GARBAGE PAILS, SINK TOPS, and BATHROOM AREAS which are prone to odors caused by the growth of some micro-organisms. At 2 ounces per gallon, FORMULA 8-13 is effective against Staphylococcus aureus, Salmonella choleraesuis and pathogenic fungi such as Trichophyton interdigitale. If a pseudomonocidal product is needed, then 3 ounces per gallon will be required.

When used for sanitization of food processing and food contact items, limit the active quaternary to 200 ppm (4 ounces per 5 gallons of water). At this level, No Potable Water Rinse is required.

For best results use FORMULA 8-13 with a cloth, sponge or mop and apply to surfaces to be treated with the recommended use-dilution. For heavily soiled areas, pre-clean surfaces using FORMULA 8-13 at 4 to 6 ounces per gallon of water.
