Dec - 9 - 1968
UNDER THE FEDERAL INSECTICIDE
FUNGICIDE AND RODENT CIDE ACT
FOR ECONOMIC POISON REGISTERED
ED UNDER NO. 1624-288
TO ATTACH

10659-48

A non-selective herbicide for control of annual and perennial weeds and grasses on rail road and industrial sites. UREABOR 8D is recommended for use under conditions of high rainfall in areas where a season of weed-free soil is desired.

APPLICATION

UREABOR 8D is a granular, free-flowing material designed for dry application. Conventional herbicide or fertilizer spreaders may be used if they can be accurately adjusted to the desired low rates of application. The hand operated PCB Spreader is especially designed for use where power equipment is not desired. Uniform distribution and even spread over the treated area are essential for best results.

ANNUAL WEEDS

Apply $\frac{1}{4}$ to $\frac{1}{2}$ pound UREABOR 8D per 100 square feet of soil surface. Applications should be made before seedlings appear or when they are young and tender, and most susceptible to chemical action. UREABOR 8D applied to the soil will give non-selective control for an extended period of time. Length of residual action is dependent on rainfall and soil type. In arid regions applications should be made just prior to the rainy season.

PERENNIAL WEEDS

Apply $\frac{1}{2}$ to 1 pound per 100 square feet during any season when moderate rainfall may be anticipated. The higher rates of application are recommended in areas of excessive rainfall or where deep-rooted perennial grasses are predominant.

NOTICE

This material is not selective in action and may be toxic to all types of vegetation and may render the entire treated area totally or partially unproductive for one or more years. Care should be taken to confine the use or application to the particular area intended to be treated and to avoid its contact with lawns, trees, shrubs, crops and other desirable plants which are not intended to be destroyed or injured. This includes precautions in treating areas which may be overlaid by roots of adjacent valuable growths. Careless application of this material, or washing by water run-off, to areas where desirable plants are growing or which will be used for later planting may result in injury to desirable plants. Avoid contamination of irrigation waters. Mechanical equipment should be thoroughly cleaned after use.

Because of the many varying conditions affecting use and application, such as location, seasonal weather, soil composition and type of vegetation, manufacturer warns buyer that these and other conditions may impair or vary the results or effects of the use of this product. In any event,

road and industrial sites. UREABOR 8D is recommended for use under conditions of high rainfall in areas where a season of weed-free soil is desired.
