WARE

**COVERS
600 to 3,000 Sq. Ft.**

**Keep Out of Reach of Children
WARNING**

ACTIVE INGREDIENT
Zinc Sulfide Monohydrate
INERT INGREDIENT

NET WT 48 OZ. (3 LB.)

GENERAL INFORMATION

Moss is a plant which thrives where the climate is cool and wet. Its presence on roofs, patios and walkways is unsightly and can be very damaging to roofs. Patios and walkways may become slippery and dangerous to walk upon. MOSS-B-WARE is an effective and economical way for combating moss on these problem areas. MOSS-B-WARE is packaged in this handy shaker container and no other equipment is necessary if applied directly from the container.

MOSS-B-WARE will not corrode aluminum or galvanized gutters.
MOSS-B-WARE will not stain roofs.

WHEN TO APPLY

MOSS-B-WARE can be applied any time of the year as an effective moss killer. However, for the quickest results, apply when the moss is in a growing condition. It takes time for the moss to absorb the MOSS-B-WARE, therefore the effect will not be noticeable until after a few rains. In most cases most of the moss will have disappeared from the roof within one year. This however will vary due to the amount of moss on the roof and the type of roofing. Roofs can be injured by mechanical methods of moss removal. We suggest you let the weather remove the moss gradually from the roof.

HOW TO APPLY

(Existing moss this container covers 600 sq. ft.) MOSS-B-WARE can be applied directly from the container as a powder or dissolved in water and applied as a liquid. The following are suggested methods of application. Use the method that best suits your need.

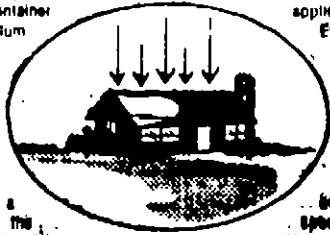

Pitched roofs that can be walked upon as wood shingles, shakes or composition can most easily be treated by applying the MOSS-B-WARE directly from the container along the edge of the roof.

Roofs, gravel, flat roofs and roofs that can not be walked upon. These types of roofs should be treated with a liquid application using a sprinkling can or any type of pump up sprayer. To mix, stir while slowly adding the chemical and stir until completely dissolved. Mix the contents of this container in 5 to 10 gallons of water. Applying the contents of this container on 600 square feet of roofing will usually give control for several years.

Patios and walkways:

Using the sprinkling can or pump up sprayer is the most effective method of application for patios and walkways. Mix the contents of this container in 5 gallons of water and apply to 600 square feet of area. Annual applications may be necessary.

Preventative applications for moss control can be applied in the same manner as outlined for existing moss control. However, the coverage can be extended to 3,000 square feet of area. This rate of application only require yearly treatment.

WARNING

Do not apply MOSS-B-WARE to bedding, hot copper gutters or down spouts, or MOSS-B-WARE will corrode copper.

1. Apply on a calm day
2. If during application, some of the chemical comes in contact with the shrubs, wash off with the garden hose
3. Do not over apply, excess run-off of this chemical may cause damage to lawns or ornamentals or shrubbery
4. Because wet roofs are more slippery, applications should be made when the roof is dry.

ENVIRONMENTAL HAZARDS

This product is toxic to fish. Do not apply directly to body of water. Do not contaminate water by cleaning of equipment or disposal of wastes. Apply this product only as specified on this label.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its label.

STORAGE AND DISPOSAL

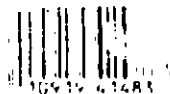

STORAGE: Do not contaminate water, food, or feed by storage or disposal. Store in a dry place.
DISPOSAL: Do not reuse empty container. Wash container and put in trash.

STORE IN A DRY PLACE

NOTICE

Seller makes no warranty, expressed or implied, concerning the use of this product other than indicated on the label. Buyer assumes all risk of use and handling of this material which, such use and handling is contrary to the instructions.
