

MICRO VAPOR, when used as directed, can be used around food, food products, utensils and equipment. Foods should be removed or covered during treatment. All food processing surfaces should be covered during treatment or thoroughly cleaned before using. When using the product as a space spray in these areas, apply only when plant is not in operation. MICRO VAPOR kills the accessible exposed stages of flies, mosquitoes, silverfish, flying moths, gnats, crickets, roaches, spiders, scorpions, wasps, hornets, mites; and most common stored grain pests, including granary weevil, rice weevil, grain beetle, spider beetle, angoumois grain moth, Mediterranean flour moth, and grain mites.

Micro Vapor INSECTICIDE

ACTIVE INGREDIENTS

Pyrethrins	.35%
Technical Piperonyl Butoxide	3.50%
Petroleum Distillate	96.15%
	100%

**Equivalent to 2.9% of (Butylcarbityl, 6-propyl-piperonyl) ether and to .7% of related compounds.

For Industrial and Institutional Use Only

CAUTION

KEEP OUT OF THE REACH OF CHILDREN.
DO NOT SPRAY OR STORE NEAR HEAT OR
OPEN FLAME. HARMFUL IF SWALLOWED.

MICRO VAPOR is useful in meat packing and food processing plants, mills, elevators, granaries, warehouses and food storages. It should only be applied as an aerosol spray in the edible products areas of federally inspected meat, poultry or egg packing plants.

SPACE SPRAY: Use a good machine which delivers a fine mist. Against the listed flying insects, direct the spray upwards, filling the room with a mist. If possible, keep doors and windows closed for ten minutes after spraying. Do not remain in treated area. Ventilate the area when treatment is completed. For control of the listed running and crawling insects, direct mist toward and into all places commonly inhabited by them, such as cracks, wall openings or crevices.

SURFACE SPRAY: Spray large coarse particles onto baseboards, wall crevices, shelving, etc. The spray should be wet, and should be repeated when needed.
