

#### DIRECTIONS FOR USE

This unit is especially designed for use in closed areas where the control of odors is important. It will aid in the control of odors such as body odor, stale smoke, and cooking odors. It should be used in restrooms, dining rooms, serving areas, halls, lounges, offices, locker rooms, schools, as well as most public or private areas where odor control is needed. One unit is recommended per 6000 cubic feet of space. Air movement and ventilation rate may vary this somewhat.

Open the door of the cabinet and remove used can if the machine has been previously used. With the valve opening pointed toward you, place the new can in the cabinet and snap in place. Step to one side, then turn control switch to "ON" position and push switch to test operation. The machine should operate one full cycle and dispense one shot of spray. Close the cabinet door. The unit contains 3400 controlled sprays for use in closed areas that will last for 30 days when used on a 24 hour basis, or 60 days if used 12 hours per day when set to dispense every 15 minutes.
