

FOR USE IN AUTOMATIC DISPENSERS: One dispensing unit should be installed for each 6,000 cubic feet of space to be treated. The Dispenser activates the 54 mg. valve once every 15 minutes; after two hours of operation, enough insecticide is suspended in the air to kill a substantial proportion of the flies, mosquitoes and gnats present. Usually the effectiveness will be noticeable within one hour after the Dispenser is activated. If less than 24 hour control is required, the Dispenser should be set to start one hour before control is desired and run one hour after control is no longer needed. Keep in mind that such factors as air flow rate, size of space treated, humidity and room temperatures all affect insect activity and control. Therefore, one unit per 6,000 cubic feet should be considered as an average need with adjustments made depending on specific conditions at place of usage. As with any method of insect control, best results are achieved when sanitation and other positive insect-prevention practices are followed. This 6 1/2 oz. can of insect killer contains approximately 3,400 "shots" sufficient to sustain operation for a total of 850 hours (35 days on around the clock basis) or 70 days on a 12 hour basis. When used on a 24 hour basis, it is suggested that the container be changed once a month (once every 2 months on a 12 hour basis).

AUTOMATIC DISPENSER Concentrated Aerosol Insect Killer contains a highly effective insecticide formulation specifically designed for use in automatic mist dispensing units around food handling establishments. Food Processing Establishments, restrooms, dining rooms and restaurants where flies, gnats, flying moths, and mosquitoes are an annoyance.

PHYSICAL AND CHEMICAL HAZARDS: Contents under pressure. Do not puncture. Do not use or store near open flame. Exposure to temperatures above 130°F. may cause bursting. Never throw container into fire or incinerator.

CAUTION: Do not use in nurseries or rooms where infants, ill or aged persons are confined. Do not install directly over or within 12 feet of any food handling or dispensing area. Large drafts or forced ventilation may reduce or eliminate the insecticidal efficacy of these installations.
