Attn: Susan Watson

Subject: Mizer Economy Insecticide
EPA Registration No. 10807-44
Letter dated August 13, 1992

Dear Ms. Watson:

The labeling referred to above, submitted in connection with registration under the Federal Insecticide, Fungicide, and Rodenticide Act, as amended, is acceptable. A stamped copy is enclosed for your records.

At the next printing, change the Statement Of Practical Treatment for Eyes to read: "Flush with plenty of water. If irritation persists, consult a physician."

The Confidential Statement Of Formula (CSF) dated August 13, 1992 is acceptable and has been placed into the file for this product.

A copy of the Agency's letter dated November 19, 1990 is enclosed for your information. The information regarding the fragrance, Fragrance Lime A 1711, has not as yet been received. Submit this information or have your supplier do so. When submitting this information, you or your supplier should reference your registration number.

Sincerely,

Richard F. Mountfort
Product Manager 10
Insecticide & Rodenticide Branch
Registration Division (H7505C)

DIRECTIONS FOR USE
 It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

DISPOSAL: Do not reuse empty container. Wrap container and put in trash collection.

FOR USE IN AUTOMATIC DISPENSERS: One dispensing unit should be installed for each 6,000 cubic feet of space to be treated. The dispenser activates the 54 mg valve once every 15 minutes. After two hours of operation enough insecticide is suspended in the air to kill a substantial proportion of the flies, mosquitoes and gnats present. Usually the effectiveness will be noticeable within one hour after the dispenser is activated. If less than 24-hour control is required the dispenser should be set to start one hour before control is desired and run one hour after control is no longer needed. Keep in mind that such factors as air flow rate, size of space treated, humidity and room temperature all affect insect activity and control. Therefore, one unit per 6,000 cubic feet should be considered as an average rate. With adjustments made depending on specific situations at place of usage. As with any method of insect control, best results are achieved when sanitation and other positive insect prevention practices are followed.

This 6 oz can of insect killer contains approximately 3,400 shots, sufficient to sustain operation for a total of 850 hours: 35 days on around-the-clock basis, or 70 days on a 12-hour basis. When used on a 24-hour basis, it is suggested that the container be changed once a month (once every 2 months on a 12-hour basis).
