POOLCHLOR

Chlorinating Liquid for Pool and Spa Sanitization

Active Ingredient: Sodium Hypochlorite.....12.5%
 Inert Ingredients.....87.5%
 Total.....100.0%

KEEP OUT OF REACH OF CHILDREN

DANGER

FIRST AID

IF IN EYES: Rinse with water, remove contact lenses (if applicable), and flood eyes with water for 15 minutes. Get prompt medical attention.

IF SWALLOWED: Drink large amounts of water. DO NOT induce vomiting. Call a physician or poison control center immediately.

IF ON SKIN: Wash with plenty of soap and water.

See additional precautions and directions for use on back panel.

DIRECTIONS FOR USE

It is a violation of Federal Law to use POOLCHLOR in a manner inconsistent with its labeling. Note: POOLCHLOR degrades with age. Use a chlorine test kit and increase dosage, as necessary, to obtain the required level of available chlorine.

SWIMMING POOL DISINFECTION

NEW POOLS AND SPRING START-UP: For a new pool or spring start-up, super-chlorinate with 52 to 104 ounces (1 quart 20 ounces to 3 quarts 8 ounces) of POOLCHLOR for each 10,000 gallons of water to yield 5 - 10 ppm available chlorine by weight.

TESTING: Check the level of available chlorine with a test kit. Adjust and maintain pool water pH to between 7.2 - 7.8. Adjust and maintain the alkalinity of the pool to between 50 - 100 ppm.

MAINTENANCE: To maintain the pool, add manually or by a feeder device 1) ounces of POOLCHLOR for each 10,000 gallons of water to yield an available chlorine residual between 0.6 - 1.0 ppm by weight. Stabilized pools should maintain a residual of 1.0 - 1.5 ppm available chlorine.

SUPERCHLORINATION: Every 7 days, or as necessary, superchlorinate the pool with 52 to 104 (1 quart 20 ounces to 3 quarts 8 ounces) of product for each 10,000 gallons of water to yield 5 to 10 ppm available chlorine by weight. Check the level of available chlorine with a test kit. Do not re-enter pool until chlorine residual is between 1.0 - 3.0 ppm.

DRAINING POOL: When water is to be drained from the pool, available chlorine must be allowed to dissipate from treated water before discharge. Do not chlorinate water 24 hours prior to discharge.

WINTERIZING: While water is still clear and clean, apply 3 ounces of product per 1,000 gallons of pool water while filter and pump are running to obtain a 3.0 ppm chlorine residual as determined by a suitable test kit. Cover pool. Turn off heater and pump, and prepare them and associated components for winter following manufacturer's instructions.

SPA DISINFECTION

NEW SPAS AND START UP: Apply 10 ounces of product per 1,000 gallons of water (equivalent to 10.0 ppm available chlorine) uniformly over the surface of the water. Make minor adjustments, as necessary, to establish a free available chlorine residual of 10.0 ppm.

MAINTENANCE: Apply 54 ounces of product per 1,000 gallons of

water to maintain a free available chlorine level as determined by a suitable test kit. Maintain pool water pH to 7.2 - 7.8. Note: Some oils, soaps, cleaners, etc. may cause foaming and/or reduce available chlorine during periods when a residual of 3.0 ppm by adding 3 ounces of POOLCHLOR for each 10,000 gallons of water. If available chlorine level falls below 3.0

STORAGE AND DISPOSAL

Keep POOLCHLOR in a tightly closed container. Store in a cool, dry, well-ventilated area away from sunlight, open flame, and heat. Do not store in decomposition, isolate container (if possible) with large quantities of water. POOLCHLOR in the pool or spa should be diluted with water before disposal in a sanitary sewer. Do not contaminate ground water. Disposal, or cleaning of equipment, container and carrier to dealer/distributor.

PRECAUTIONARY STATEMENTS

Hazards to Humans and Domestic Animals

DANGER: CORROSIVE. May cause severe skin and eye irritation, chemical burns to broken skin. Cause blindness if in eyes. Use eye glasses or goggles and rubber gloves. Wash after handling. Avoid breathing vapors. Move to well-ventilated areas as soon as possible. Do not use if odors have dissipated.

Environmental Hazards

Sodium hypochlorite is toxic to fish and aquatic life. Do not discharge effluent containing POOLCHLOR into ponds, estuaries, oceans, or public waterways. If you are specifically identified and addressed in a discharge effluent containing POOLCHLOR, you must previously notify the sewage treatment plant. For more guidance contact your state water board or EPA.

Physical and Chemical Hazards

STRONG OXIDIZING AGENT: Mix only with water. See label directions. Mixing POOLCHLOR with ammonia, acids, detergents, etc. or organic materials such as urine, hair oil, etc., will release irritating to eyes, lungs, and mucous membranes.
