

NEW FIRE RESISTANT
hydro-gard

ACCEPTED
APR 30 1974
UNDER THE FEDERAL INSECTICIDE, FUNGICIDE AND RODENTICIDE ACT
AS ECONOMIC POISON REGISTRY
REG. UNDER NO. 10897-7

CONCENTRATED POOL CHLORINE
GRANULAR CHLORINE
ACTIVE INGREDIENT
SODIUM DICHLORO-S-TRIAZINETRIONE DIHYDRATE 100%
AVAILABLE CHLORINE 56%

DANGER
Keep out of reach of children.
SEE FIRST AID AND OTHER PRECAUTIONS ON SIDE PANEL
NET WT. EPA Reg. No. 10897-7

- Features a dry chlorine that dissolves immediately
- A most effective germicide and algicide
- Will not cause cloudiness in water
- Will not add scale-forming minerals to the water
- Will maintain your pool crystal clear
- Flame-resistant

The control of pH is greatly simplified using Hydro-Gard Concentrated Pool Chlorine. In fact, you will require from 1/2 to 1 1/2 the amount of acid usually applied. Hydro-Gard Concentrated Pool Chlorine provides a more stable form of chlorine for easier maintenance. An effective chlorine residual in pool water for disinfecting action. It requires less cyanuric acid and maintains constant strength regardless of storage time. It is economical because after the pH is stabilized, you will need to apply Hydro-Gard Concentrated Pool Chlorine less often.

DIRECTIONS FOR SWIMMING POOL USE

When starting up a new pool, Super Chlorinate to satisfy the peak demand and stabilize a chlorine residual of 1.0 ppm to 2.0 ppm. After the pool is stabilized, add 2 1/2 Hydro-Gard Concentrated Pool Chlorine per 1,000 gallons of pool water. The next morning add cyanuric acid at the rate of 4 1/2 per 1,000 gallons to stabilize the pool. Hydro-Gard Concentrated Pool Chlorine should be added to a pool as needed at the rate of 1/2 to 1 1/2 per 1,000 gallons of pool water to maintain a chlorine residual of 1.0 ppm to 2.0 ppm as determined by a test kit. The pH should be maintained between 7.2 and 7.6.

Shock treatments should be made every week during hot weather. After heavy rains, less frequent shock treatments may be made during hot weather. For the shock treatment, add 2 1/2 Hydro-Gard Concentrated Pool Chlorine per 1,000 gallons of pool water. Swimmers should not be permitted in the pool after the shock treatment until the chlorine residual has reached the 1.0 ppm to 2.0 ppm range. Keep in mind that a slight flexibility must be maintained in the event of heavy applications of dust and dirt caused by storms or super heavy bathing loads which require additional dosages as needed to maintain the chlorine residual between 1.0 ppm and 2.0 ppm.

DANGER

KEEP OUT OF REACH OF CHILDREN. Corrosive. Causes eye damage. Do not get in eyes or on skin. Wear safety goggles, or dust respirator and protective clothing when handling. Do not breathe dust. Dust may be harmful if inhaled. May cause skin, nose and throat irritation. May be fatal if swallowed. May cause burns to broken skin.

FIRST AID: In case of exposure, remove all excess material and flush skin or eyes with water for at least 15 minutes. If in eyes, get medical attention. Clean and irrigate. If inhaled, get fresh air. If on skin, wash with soap and water. If swallowed, get medical attention. Do not induce vomiting.

DANGER: Strong oxidizing agent. Moisture contamination may liberate irritating and hazardous chlorine-containing gases. Decomposes at 350-475°F with liberation of harmful gases. In case of decomposition, if possible isolate container in open air or well-ventilated area. Flood with large volume of water if necessary. Mix only with water. Do not mix with other pool chemicals. Use only dry, clean measuring devices. Store in a cool, dry place. Keep closed when not being used. Spill or reuse container. Rinse empty container thoroughly with water and discard. Do not use in a confined space. Treated pool effluent water should not be discharged where it will pollute streams, ponds, or water bodies. Do not contaminate water by leaving the container open to the air.

Apply this product only as specified on this label.
