POST-EMERGENT CRABGRASS CONTROL

CRABGRASS-CHICKWEED-NUTSEGE-DALLISGRASS SANDBUR-BAHIAGRASS-WOOD SORREL

ACTIVE INGREDIENTS	Trichloroacetate	4.0	Trichloroacetate	4.0
Methylparathion	0.5	Product	1.0	MSMA
INERT INGREDIENTS	95.5			

NET CONTENTS: 1 PINT

CAUTION: KEEP OUT OF REACH OF CHILDREN.
READ OTHER CAUTIONS ON BACK PANEL

TRICHONDA Post-emergent crabgrass control is a mixture of herbicide and surfactant. IT IS UNNECESSARY TO ADD ADDITIONAL SURFACTANT. Its phytotoxic properties are quickly inactivated on contact with the soil. Best results are obtained on young actively growing weeds at air temperature above 70 F.

APPLICATION: Easily applied as a spray with tank sprayer, backpack sprayer or hose-end insecticide sprayer. Partly to sprayer with water, add proper amount of material and balance of water. Apply as a spray thoroughly wetting weeds to point just short of run-off.

DIRECTIONS-LAWN and ORNAMENTAL TURF: To control CRABGRASS, CHICKWEED, NUTSEGE, DALLISGRASS, SANDBUR, BAHAGRASS and WOOD SORREL on established turf, little or no damage will be done other than temporary discoloration. Do not treat lawns with this material more than once.

NOT USE on: St. Augustine, Bahia, and other warm season grasses. Irrigate and water lawns immediately after application. Mix 4.0 to 8.0 ounces per 1000 sq. ft. of water. Use 4.0 to 8.0 tablespoons in 1 gallon of water. Thoroughly wet weeds to point just short of run-off. Application of treated areas will be most effective if made immediately after rain or irrigation. For crabgrass control.

NON-CROP: CRABGRASS, CHICKWEED, NUTSEGE, DALLISGRASS, COCKLEBUR, SPANISHWEED, SANDBUR, PUNCTURE VINE, Drainage Ditchbank, Rights Of-Way, Field Rows, and Storage Yards. Mix 4 to 8 ounces per 1000 sq. ft. of water. Use 4 to 8 tablespoons in 1 gallon spray directed vertically with low volume coverage. Thoroughly wet weeds to point just short of run-off. For crabgrass control.
